The Images Of Order:

Theory of the Image Thomas Nail, 2019-05-15 We live in an age of the mobile image The world today is absolutely saturated with images of all kinds circulating around the world at an incredible rate The movement of the image has never been more extraordinary than it is today This recent kinetic revolution of the image has enormous consequences not only for the way we think about contemporary art and aesthetics but also for art history as well Responding to this historical moment Theory of the Image offers a fresh new theory and history of art from the perspective of this epoch defining mobility The image has been understood in many ways but it is rarely understood to be fundamentally in motion The original and materialist approach is what defines Theory of the Image and what allows it to offer the first kinetic history of the Western art tradition In this book Thomas Nail further develops his larger philosophy of movement into a comprehensive kinesthetic of the moving image from prehistory to the present The book concludes with a vivid analysis of the contemporary digital image and its hybridity ultimately outlining new territory for research and exploration across aesthetics art history cultural theory and media studies *Digital Heritage Reconstruction Using Super-resolution and Inpainting* Milind G. Padalkar, Manjunath V. Joshi, Nilay L. Khatri, 2022-06-01

Heritage sites across the world have witnessed a number of natural calamities sabotage and damage from visitors resulting in their present ruined condition Many sites are now restricted to reduce the risk of further damage Yet these masterpieces are significant cultural icons and critical markers of past civilizations that future generations need to see A digitally reconstructed heritage site could diminish further harm by using immersive navigation or walkthrough systems for virtual environments An exciting key element for the viewer is observing fine details of the historic work and viewing monuments in their undamaged form This book presents image super resolution methods and techniques for automatically detecting and inpainting damaged regions in heritage monuments in order to provide an enhanced visual experience The book presents techniques to obtain higher resolution photographs of the digitally reconstructed monuments and the resulting images can serve as input to immersive walkthrough systems It begins with the discussion of two novel techniques for image super resolution and an approach for inpainting a user supplied region in the given image followed by a technique to simultaneously perform super resolution and inpainting of given missing regions It then introduces a method for automatically detecting and repairing the damage to dominant facial regions in statues followed by a few approaches for automatic crack repair in images of heritage scenes This book is a giant step toward ensuring that the iconic sites of our past are always available and will never be truly lost **Digital Image Interpolation in Matlab**

Chi-Wah Kok, Wing-Shan Tam, 2019-03-19 This book provides a comprehensive study in digital image interpolation with theoretical analytical and Matlab implementation It includes all historically and practically important interpolation algorithms accompanied with Matlab source code on a website which will assist readers to learn and understand the implementation details of each presented interpolation algorithm Furthermore sections in fundamental signal processing

theories and image quality models are also included The authors intend for the book to help readers develop a thorough consideration of the design of image interpolation algorithms and applications for their future research in the field of digital image processing Introduces a wide range of traditional and advanced image interpolation methods concisely and provides thorough treatment of theoretical foundations Discusses in detail the assumptions and limitations of presented algorithms Investigates a variety of interpolation and implementation methods including transform domain edge directed wavelet and scale space and fractal based methods Features simulation results for comparative analysis summaries and computational and analytical exercises at the end of each chapter Digital Image Interpolation in Matlab is an excellent guide for researchers and engineers working in digital imaging and digital video technologies Graduate students studying digital image processing will also benefit from this practical reference text

The Image of Celestina Enrique Fernández, 2024-01-31 La Celestina a Spanish literary masterpiece second only in importance to Don Quixote in Spanish literature has been shaped by the inclusion of images from its very first edition in 1499 The subsequent five centuries were punctuated by many illustrated editions imaginary portraits of the eponymous procuress Celestina by painters such as Murillo Goya and Picasso and more recently screen and stage adaptations Celestina became the prototype from which later representations of procuresses and bawds derived The Image of Celestina sheds light on the visual culture that developed around La Celestina including paintings illustrations and advertisements Enrique Fernández examines La Celestina as a mixed media text incorporating methods from disciplines such as art history and women's and cinema studies and considers a variety of images including promotional posters lobby pictures and playbills of theatrical and cinematic adaptations of the book Using a visual studies approach The Image of Celestina ultimately illuminates the culture of Celestina a mythical figure who surpasses the literary text in which she originated
