Scientific and Technical Information Office,1977 Asymptotic Approximations for the Sound Generated by Aerofoils in Unsteady Subsonic Flows Lorna Ayton,2015-06-15 This thesis investigates the sound generated by solid bodies in steady subsonic flows with unsteady perturbations as is typically used when determining the noise generated by turbulent interactions The focus is predominantly on modelling the sound generated by blades within an

aircraft engine and the solutions are presented as asymptotic approximations Key analytical techniques such as the Wiener Hopf method and the matched asymptotic expansion method are clearly detailed The results allow for the effect of variations in the steady flow or blade shape on the noise generated to be analysed much faster than when solving the problem numerically or considering it experimentally The High Temperature Aspects of Hypersonic Flow Wilbur C.

Nelson,2014-12-02 The High Temperature Aspects of Hypersonic Flow is a record of the proceedings of the AGARD NATO Specialists Meeting held at the Technical Centre for Experimental Aerodynamics Rhode Saint Genese Belgium in April 1962 The book contains the papers presented during the meeting that tackled a broad range of topics in the aspects of hypersonic flow The subjects covered during the meeting include pressure measurements interference effects the use of wind tunnels in aircraft development testing high temperature gas characteristics boundary layer research stability and control and the use of rocket vehicles in flight research Aerospace engineers and aeronautical engineers will find the book invaluable

Advanced Technologies in Flow Dynamics and Combustion in Propulsion and Power Lei Luo,Bengt Aake Sunden,Songtao Wang,Xiao Liu,2022-08-05 **Numerical Simulation of Compressible Euler Flows** Alain Dervieux,2013-03-08 The numerical simulation of the Euler equations of Fluid Dynamics has been these past few years a challenging problem both for research scientists and aerospace engineers The increasing interest of more realistic models such as the Euler equations originates in Aerodynamics and also Aerothermics where aerospace applications such as military aircrafts and also space vehicles require accurate and efficient Euler solvers which can be extended to more complicated modelisations including non equilibrium chemistry for supersonic and hypersonic flows at high angles of attack and Mach number regimes involving strong shocks and vorticity This book contains the proceedings of the GAMM Workshop on the Numerical Simulation of Compressible Euler Flows that WLS held at INRIA Rocquencourt France on June 10-13 1986 The purpose of this event was to compare in terms of accuracy and efficiency several codes for solving compressible inviscid mainly steady Euler flows This workshop was a sequel of the GAMM workshop held in 1979 in Stockholm this time though because of the present strong activity in numerical methods for the Euler equations the full potential approach was not included Since 1979 other Euler workshops have been organised several of them focussed on airfoil calculations however many recently derived methods were not presented at these workshops because among other reasons the methods were not far enough developed or had not been applied to flow problems of sufficient complexity In fact the 1986 GAMM workshop scored very high as regards to the novelty of methods *Annual Report - National Advisory Committee for Aeronautics* United States.
