The Emergence of a Scientific Culture Stephen Gaukroger, 2008-10-23 Why did science emerge in the West and how did scientific values come to be regarded as the yardstick for all other forms of knowledge Stephen Gaukroger shows just how bitterly the cognitive and cultural standing of science was contested in its early development Rejecting the traditional picture of secularization he argues that science in the seventeenth century emerged not in opposition to religion but rather was in many respects driven by it Moreover science did not present a unified picture of nature but was an unstable field of different often locally successful but just as often incompatible programmes To complicate matters much depended on attempts to reshape the persona of the natural philosopher and distinctive new notions of objectivity and impartiality were imported into natural philosophy changing its character radically by redefining the qualities of its practitioners The West's sense of itself its relation to its past and its sense of its future have been profoundly altered since the seventeenth century as cognitive values generally have gradually come to be shaped around scientific ones Science has not merely brought a new set of such values to the task of understanding the world and our place in it but rather has completely transformed the task redefining the goals of enquiry This distinctive feature of the development of a scientific culture in the West marks it out from other scientifically productive cultures In *The Emergence of a Scientific Culture* Stephen Gaukroger offers a detailed and comprehensive account of the formative stages of this development and one which challenges the received wisdom that science was seen to be self evidently the correct path to knowledge and that the benefits of science were immediately obvious to the disinterested observer

*The Virgilian Tradition II* Craig Kallendorf, 2021-10-25 *The Virgilian Tradition II* brings together thirteen essays by historian Craig Kallendorf The essays present a distinctive approach to the reception of the canonical classical author Virgil that is focused around the early printed books through which that author was read and interpreted within early modern culture Using the prefaces dedicatory letters and commentaries that accompanied the early modern editions of Virgil's *Eclogues* *Georgics* *Aeneid* and *Appendix Virgiliana* they demonstrate how this paratextual material was used by early readers to develop a more nuanced interpretation of Virgil's writings than twentieth century scholars believed they were capable of The approach developed throughout this volume shows how the emerging field of book history can enrich our understanding of the reception of Greek and Latin authors This book will appeal to scholars and students of early modern history as well as those interested in book history and cultural history CS 1103

*Rhetoric & Dialectic in the Time of Galileo* Jean Dietz Moss, William A. trial The authors combine their vast knowledge of rhetoric history and philosophy to explain the background of the dispute between science and religion They present an engaging discussion of the prevailing modes of rhetorical and scientific arguments in Northern Italy during the Renaissance They display primary texts on the arts of rhetoric and dialectic by authors whose thought was known to Galileo

### **Parallels and Responses to Curricular Innovation** Brad

Petitfils,2014-10-24 This volume explores two radical shifts in history and subsequent responses in curricular spaces the move from oral to print culture during the transition between the 15th and 16th centuries and the rise of the Jesuits and the move from print to digital culture during the transition between the 20th and 21st centuries and the rise of what the philosopher Jean Baudrillard called hyperreality The curricular innovation that accompanied the first shift is considered through the rise of the Society of Jesus the Jesuits These men created the first global network of education and developed a humanistic curriculum designed to help students navigate a complicated era of the known human centered and unknown God centered universe The curricular innovation that is proposed for the current shift is guided by the question What should be the role of undergraduate education become in the 21st century Today the tension between the known and unknown universe is concentrated on the interrelationships between our embodied spaces and our digitally mediated ones As a result today s undergraduate students should be challenged to understand how in the objectively focused commodified STEM centric landscape of higher education the human subject is decentered by the forces of hyperreality and in turn how the human subject might be recentered to balance our humanness with the new realities of digital living Therein one finds the possibility of posthumanistic education

An illuminating study of the marriages and family lives of Diderot Lavoisier and other geniuses of the Age of Reason We may imagine the lone scientific or philosophical genius generating insights in isolation but in reality the families of scientists and philosophers during the Enlightenment played a substantial role not only making space for inquiry within the home but also assisting in observing translating calculating and illustrating Sentimental Savants is the first book to explore the place of the family among the savants of the French Enlightenment a group that openly embraced their families and domestic lives even going so far as to test out their ideas from education to inoculation on their own children Meghan K Roberts delves into the lives and work of such major figures as Denis Diderot Emilie Du Chatelet the Marquis de Condorcet Antoine Lavoisier and Jerome Lalande to paint a striking portrait of how sentiment and reason interacted in the eighteenth century to produce not only new kinds of knowledge but new kinds of families as well A well crafted study an important contribution to what Robert Darnton has called the social history of ideas

*The Darker Side of the Renaissance* Walter Mignolo, 1995 Winner of the Modern Language Association's Katherine Singer Kovacs Prize The Darker Side of the Renaissance weaves together literature semiotics history historiography cartography geography and cultural theory to examine the role of language in the colonization of the New World Walter D Mignolo locates the privileging of European forms of literacy at the heart of New World colonization He examines how alphabetic writing is linked with the exercise of power what role the book has played in colonial relations and the many connections between writing social organization and political control It has long been acknowledged that Amerindians were at a disadvantage in facing European invaders because native cultures did not employ the same kind of texts hence knowledge that were validated by the Europeans Yet no study until this one has so thoroughly analyzed either the process or the implications of conquest and destruction through sign systems Starting with the contrasts between Amerindian and European writing systems Mignolo moves through such topics as the development of Spanish grammar the different understandings of the book as object and text principles of genre in history writing and an analysis of linguistic descriptions and mapping techniques in relation to the construction of territoriality and understandings of cultural space The Darker Side of the Renaissance will significantly challenge commonplace understandings of New World history More importantly it will continue to stimulate and provide models for new colonial and post colonial scholarship a contribution to Renaissance studies of the first order The field will have to reckon with it for years to come for it will unquestionably become the point of departure for discussion not only on the foundations and achievements of the Renaissance but also on the effects and influences on colonized cultures Journal of Hispanic Latino Theology Walter D Mignolo is Professor in the Department of Romance Studies and the Program in Literature Duke University

**Descartes: An Intellectual Biography** Stephen Gaukroger, 1995-03-30 Ren Descartes 1596 1650 is the father of modern philosophy and one of the greatest of all thinkers This is the first intellectual biography of Descartes in English it offers a fundamental reassessment of all aspects of his life and work Stephen Gaukroger a leading authority on Descartes traces his intellectual development from childhood showing the connections between his intellectual and personal life and placing these in the cultural context of seventeenth century Europe Descartes early work in mathematics and science produced ground breaking theories methods and tools still in use today This book gives the first full account of how this work

informed and influenced the later philosophical studies for which above all Descartes is renowned Not only were philosophy and science intertwined in Descartes life so were philosophy and religion The Church of Rome found Galileo guilty of heresy in 1633 two decades earlier Copernicus theories about the universe had been denounced as blasphemous To avoid such accusations Descartes clothed his views about the relation between God and humanity and about the nature of the universe in a philosophical garb acceptable to the Church His most famous project was the exploration of the foundations of human knowledge starting from the proof of one s own existence offered in the formula Cogito ergo sum I am thinking therefore I exist Stephen Gaukroger argues that this was not intended as an exercise in philosophical scepticism but rather to provide Descartes scientific theories influenced as they were by Copernicus and Galileo with metaphysical legitimation This book offers for the first time a full understanding of how Descartes developed his revolutionary ideas It will be welcomed by all readers interested in the origins of modern thought
