**Resource Economics** Jonathan M. Harris, Brian Roach, 2016-05-05 Harris and Roach present a compact and accessible presentation of the core environmental and resource topics and more with analytical rigor as well as engaging examples and policy discussions. They take a broad approach to theoretical analysis using both standard economic and ecological analyses and developing these both from theoretical and practical points of view. It assumes a background in basic economics but offers brief review sections on important micro and macroeconomic concepts as well as appendices with more advanced and technical material. Extensive instructor and student support materials including PowerPoint slides, data updates, and student exercises are provided.

The Taxing Road to Sustainable Growth: Resource Productivity and Corporate Taxation Mark Bowler Smith, 2013. This book explores one way in which a tax system might help promote competitiveness and sustainable development. Focusing on the UK corporation tax, it recommends the introduction of a Resource Productivity Tax Credit where resource productivity is defined as the money value of outputs relative to the money value of material resource and non-renewable energy inputs. The book is structured such that it first explores the legal mandate to promote competitiveness and sustainable development as contained in article 33 of the Treaty of the European Union. It then explores what competitiveness and sustainable development actually mean, particularly in an EU policy context through the lenses of Europe 2020 and the EU Sustainable Development Strategy. It concludes that not only is there a great deal of common ground between competitiveness and sustainable development as objectives, but that increasing resource productivity is a necessary means to those shared ends. After exploring EU tax policy and the relevant rules of the UK corporation tax for evidence of any kind of focus on competitiveness and sustainable development, as well as examining the suitability of corporate income taxes as policy instruments for increasing resource productivity, the book concludes that there is ample scope for a statutory tax incentive to be appended to the UK corporation tax to help fulfil the article 33 mandate. The headline objective of the Resource Productivity Tax Credit is to promote higher resource productivity in the trading activities of individual companies in particular targeted sectors through improvements to the knowledge base of those companies rather than through the increased use of raw materials, non-renewable energy, and/or intermediate goods.

Accounting for Natural Resources in the Foothills Model Forest Michael Neal Patriquin, William Alexander White, Northern Forestry Centre (Canada), Michelle Margaret Spence, Foothills Model Forest, 2004. Natural resource accounts provide useful information for integrated resource management through the identification of both market and non-market values. This report begins with a review of previous studies investigating the theory and application of natural resource accounting. It then presents a natural resource accounting case study for the Foothills Model Forest region of Alberta that details value estimates for market components: forestry, trapping, agriculture, minerals, visitor-related industries, the rest of the economy, non-market components: recreation, subsistence, resource use, environmental control services such as carbon sequestration and biodiversity maintenance. The resulting natural resource account represents a baseline of values that can be used to assess the progress
