Undergraduate Mathematics for the Life Sciences Glenn Ledder,Jenna P. Carpenter,Timothy D. Comar,2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Renegotiating Disciplinary Fields in the Life Sciences Alessandro Minelli, 2021-02-24 Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks There are also problems with the current definitions or circumscriptions of key concepts such as gene species and homology and even of whole disciplinary fields within the life sciences e.g. developmental biology These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences In the diversity of topics addressed and approaches to move beyond the current disciplinary organization the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences

Gaither's Dictionary of Scientific Quotations Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics

Biopolitics and the Philosophy of Death Paolo Palladino,2016-10-20 While the governance of human existence is organised ever increasingly around life and its potential to proliferate beyond all limits much critical reflection on the phenomenon is underpinned by considerations about the very negation of life death The challenge is to construct an alternative understanding of human existence that is truer to the complexity of the present biopolitical moment Palladino responds to the challenge by drawing upon philosophical historical and sociological modes of inquiry to examine key developments in the history of biomedical understanding of ageing and death He combines this genealogy with close reflection upon its implications for a critical and effective reading of Foucault s and Deleuze s foundational work on the relationship between life death and embodied existence Biopolitics and the Philosophy of Death proposes that the central task of contemporary critical thought is to find ways of coordinating different ways of thinking about molecules populations and the mortality of the human organism without transforming the notion of life itself into the new transcendent truth that would take the place once occupied by God and Man

Life. Death. Immortality. Gennadiy Zhegunov,Denys Pogozhykh,2023-04-29 What are life and death Is it possible to understand their essence and give clear definitions Countless books and articles have been devoted to trying to answer these intriguing questions However there are still no definite and generally accepted answers The intrigue remains And meanwhile human attempts to vanquish death and achieve immortality continue apace This book is an attempt to answer the

eternal questions about life and death by analyzing synthesizing and rethinking the known facts that characterize life The material here should be of particular interest as it contains many hypotheses philosophical generalizations and well informed speculations What is most important for life matter energy or information How are individual lives and the phenomenon of life in general related What serves what does the genome serve the cell or does the cell serve the genome What is the value of life and death Can we become immortal The inquisitive reader will find original answers to these and other exciting questions in the pages of this stimulating book *Education and Ethics in the Life Sciences* Brian Rappert, 2010-06-01 At the start of the twenty first century warnings have been raised in some quarters about how by intent or by mishap advances in biotechnology and related fields could aid the spread of disease Science academics medical organisations governments security analysts and others are among those that have sought to raise concern EDUCATION AND ETHICS IN THE LIFE SCIENCES examines a variety of attempts to bring greater awareness to security concerns associated with the life sciences It identifies lessons from practical initiatives across a wide range of national contexts as well as more general reflections about education and ethics The eighteen contributors bring together perspectives from a diverse range of fields including politics virology sociology ethics security studies microbiology and medicine as well as their experiences in universities think tanks and government In offering their assessment about what must be done and by whom each chapter addresses a host of challenging practical and conceptual questions EDUCATION AND ETHICS IN THE LIFE SCIENCES will be of interest to those planning and undertaking training activities in other areas In asking how education and ethics are being made to matter in an emerging area of social unease it will also be of interest to those with more general concerns about professional conduct
