CLINICAL IMPORTANCE

The public has become increasingly more aware of the importance of nutrition to health during the past four decades as a result of the growing recognition that food is associated with disease processes such as coronary artery disease, hypertension, obesity, diabetes mellitus and cancer. *Healthy People 2010* is a comprehensive set of disease prevention and health promotion objectives for the United States. *Healthy People 2010* uses 10 leading health indicators that reflect the major health concerns in the nation at the beginning of the 21st century. These indicators were selected based on their importance as public health issues and their ability to motivate action and provide data to measure progress against specific goals. One of the focus areas is nutrition, especially overweight/obesity conditions (Healthy People 2010).

The discipline of veterinary nutrition and its relationship to the practice of veterinary medicine have benefited from these changes. Food animal veterinarians have long recognized that no aspect of the production enterprise has more impact on health and production than nutrition; many health problems are associated with inadequate feeding programs. Food animal veterinarians recognize that optimizing feeding programs improves food animal health and productivity and, as a result, the economic status of producers. Food animal veterinarians who provide their clients with high-quality production medicine programs become unbiased nutritional consultants.

Similarly, small animal practitioners must improve their nutritional counseling skills because they cannot truly meet their patients' health needs without optimizing nutrition. Small animal veterinarians can improve the quality of medicine delivered to their patients by knowledgeably and systematically addressing the nutritional aspects of each case, whether the goal is treating or preventing disease. Veterinarians must emphasize health maintenance and wellness strategies for companion animals to provide the most beneficial service. Total disease prevention requires lifelong dedication to proper nutrition, immunizations, dental care and parasite control programs. Nutritional factors are a cornerstone in maximizing health, performance, longevity and disease prevention. Nutritional counseling and intervention, however, are beneficial only if done properly.

Veterinarians and their health care teams have considerable influence on the foods clients feed their pets. A study conducted by *Veterinary Economics* in 1990 found that 87% of veterinarians felt that offering nutritional services improved their practices (Gants, 1990). Ninety-four percent of these veterinarians said that their clients were somewhat or very receptive to nutrition-related information. A 1995 study conducted by the American Animal Hospital Association found that 54% of pet owners interviewed sought veterinary advice on pet foods at least once and 43% had received a recommendation from their veterinarian on which manufacturer's pet food to feed their puppies or kittens. Seventy percent of the latter group fed the brand of food recommended by their veterinarian (AAHA, 1995).
