Social Constructivism and the Philosophy of Science André Kukla, 2000 Social constructionists maintain that we invent the properties of the world rather than discover them Is reality constructed by our own activity Do we collectively invent the world rather than discover it Andr Kukla presents a comprehensive discussion of the philosophical issues that arise out of this debate analysing the various strengths and weaknesses of a range of constructivist arguments and arguing that current philosophical objections to constructivism are inconclusive However Kukla offers and develops new objections to constructivism distinguishing between the social causes of scientific beliefs and the view that all ascertainable facts are constructed *Constructivism in Science Education* Michael Matthews, 2012-12-06 Constructivism is one of the most influential theories in contemporary education and learning theory It has had great influence in science education The papers in this collection represent arguably the most sustained examination of the theoretical and philosophical foundations of constructivism yet published Topics covered include orthodox epistemology and the philosophical traditions of constructivism the relationship of epistemology to learning theory the connection between philosophy and pedagogy in constructivist practice the difference between radical and social constructivism and an appraisal of their epistemology the strengths and weaknesses of the Strong Programme in the sociology of science and implications for science education The book contains an extensive bibliography Contributors include philosophers of science philosophers of education science educators and cognitive scientists The book is noteworthy for bringing this diverse range of disciplines together in the examination of a central educational topic **Social Constructivism**, 2014 **New Directions in the Philosophy of Science** Maria Carla Galavotti, Dennis Dieks, Wenceslao J. Gonzalez, Stephan Hartmann, Thomas Uebel, Marcel Weber, 2014-06-02 This volume sheds light on still unexplored issues and raises new questions in the main areas addressed by the philosophy of science Bringing together selected papers from three main events the book presents the most advanced scientific results in the field and suggests innovative lines for further investigation It explores how discussions on several notions of the philosophy of science can help different scientific disciplines in learning from each other Finally it focuses on the relationship between Cambridge and Vienna in twentieth century philosophy of science The areas examined in the book are formal methods the philosophy of the natural and life sciences the cultural and social sciences the physical sciences and the history of the philosophy of science *The Philosophy of Science and Technology Studies* Steve Fuller, 2013-10-18 As the field of Science and Technology Studies STS has become more established it has increasingly hidden its philosophical roots While the trend is typical of disciplines striving for maturity Steve Fuller a leading figure in the field argues that STS has much to lose if it abandons philosophy In his characteristically provocative style he offers the first sustained treatment of the philosophical foundations of STS and suggests fruitful avenues for further research With stimulating discussions of the Science Wars the Intelligent Design Theory controversy and theorists such as Donna Haraway and Bruno Latour Philosophy of Science and

The Philosophy of Mathematics Education Paul Ernest, 2002-11-01 Although many agree that all teaching rests on a theory of knowledge there has been no in depth exploration of the implications of the philosophy of mathematics for education This is Paul Ernest's aim Building on the work of Lakatos and Wittgenstein it challenges the prevalent notion that mathematical knowledge is certain absolute and neutral and offers instead an account of mathematics as a social construction This has profound educational implications for social issues including gender race and multiculturalism for pedagogy including investigations and problem solving and challenges hierarchical views of mathematics learning and ability Beyond this the book offers a well grounded model of five educational ideologies each with its own epistemology values aims and social group of adherents An analysis of the impact of these groups on the National Curriculum results in a powerful critique revealing the questionable assumptions values and interests upon which it rests The book finishes on an optimistic note arguing that pedagogy left unspecified by the National Curriculum is the way to achieve the radical aims of educating confident problem posers and solvers who are able to critically evaluate the social uses of mathematics
