The Details Of Modern Architecture 1928 To 1988 Details Of Modern Architecture:

The Details of Modern Architecture Edward R. Ford, 1990 Covering the period 1890 1932 this book focuses on various recognised masters explaining the detailing and construction techniques used in their buildings *The Environmental Imagination* Dean Hawkes, 2008 This volume presents a chronologically ordered and detailed account of the developing relationship between technics and poetics in environmental design in architecture through a consideration of the work of major names in the field *Integrated Buildings* Leonard R. Bachman, 2004-01-27 An anatomical study of building systems integration with guidelines for practical applications Through a systems approach to buildings *Integrated Buildings The Systems Basis of Architecture* details the practice of integration to bridge the gap between the design intentions and technical demands of building projects Analytic methods are introduced that illustrate the value benefit and application of systems integration as well as guidelines for selecting technical systems in the conceptual schematic and design development stages of projects Landmark structures such as Eero Saarinen s John Deere Headquarters Renzo Piano s Kansai International Airport Glenn Murcutt s Magney House and Richard Rogers s Lloyd s of London headquarters are presented as part of an extensive collection of case studies organized into seven categories Laboratories Offices Pavilions Green Architecture High Tech Architecture Airport Terminals Residential Architecture Advanced material is provided on methods of integration including an overview of integration topics the systems basis of architecture and the integration potential of various building systems An expanded case study of Ibsen Nelsen s design for the Pacific Museum of Flight is used to demonstrate case study methods for tracing integration through any work of architecture Visually enhanced with more than 300 illustrations diagrams and photographs *Integrated Buildings The Systems Basis of Architecture* is a valuable reference guide for architecture and civil engineering students as well as architects engineers and other professionals in the construction industry *Designing Architecture* Andrew Pressman, 2012-05-04 *Designing Architecture* is an indispensable tool to assist both students and young architects in formulating an idea transforming it into a building and making effective design decisions This book promotes integrative and critical thinking in the preliminary design of buildings to inspire creativity innovation and design excellence This compendium of individual wisdom and collective experience offers explicit guidance to students and young professionals on how to approach analyze and execute specific tasks develop and refine a process to facilitate the best possible design projects and create meaningful architectural form Here the design process from orchestrating client participation to finalizing schematic design is explored and illuminated The following material is presented to make the book a useful didactic tool for professional development explicit strategies for doing design rather than simply reviewing principles and precedents creative ideas in approaching and framing problems in design terms specific methods to translate ideas to culturally significant socially responsive and environmentally sensitive buildings techniques to integrate all levels of cognition from analysis to epiphany counsel on developing a personalized process for engaging design

projects case studies augment the text and chronicle fascinating applications of the design process The essence of this book lies in an integrated and holistic approach to each unique project as well as fostering curiosity and exploration a departure from algorithms easy generalities or a formula for design Designing Architecture will inspire readers to elevate the quality of preliminary designs and unravel some of the mystery of creating the most beautiful responsive and responsible architectural design possible

Tiltwallism Jeffrey Blaine Brown, The Images Publishing Group, 2014-07-09 Written by Jeffrey Brown AIA Tiltwallism is designed to be an introductory resource to architects and an inspiration to contractors developers and structural consultants who have encountered the technology of Tilt Wall construction The vast amount of trade and technical information available on the subject is interpreted in a formal treatment for the first time on a subject at the forefront of the architectural role in an era of lowered construction costs Brown provides a full synthetic treatment of Tilt Wall construction by laying out the design opportunities in engaging in the architectural exploration of a low technology low cost form of construction He explains its history methodology and relationship to current architectural approaches to meaning Brown writes in a balanced style targeted at both architects and academics that will also be accessible to non architects and allied professionals The title is richly illustrated in an effort to be useful to the many ancillary professions such as contractors developers and real estate brokers who are driving this increasingly prevalent approach to investment architecture

The Emerald City and Other Essays on the Architectural Imagination Daniel Willis, 1999 In The Emerald City Dan Willis takes us on a flight of imagination that paradoxically never strays far from the most tangible even intimate subjects His essays range from the Tower of Babel to the Wizard of Oz from Christo to Christmas trees from the lightness of being to the weight of architecture This ultimately optimistic book suggests that architecture is as vital as ever It is tempting to say that our present cultural situation has rendered architecture nearly impossible if not unnecessary But it is also possible to look to what our lives at the turn of the millennium typically lack fulfillment spirituality a sense of belonging weight and to conclude that the ground for architecture has never been more fertile The texts intelligent and readable draw equally from literary sources architectural practice philosophical analyses pop culture and everyday experiences Willis's perspective as a writer architect artist and teacher informs his work his texts are at once reflective and proactive as they challenge readers to rethink their participation in the built environment Accompanying the text are the author's original illustrations which link the forms and forces surrounding architecture at the end of the twentieth century in novel thought provoking ways

Building Theories Franca Trubiano, 2022-11-25 Building Theories speaks to the value of words in architecture It addresses the author's fascination with the voices of architects engineers builders and craftspeople whose ideas about building have been captured in text It discusses the content of treatises essays articles and letters by those who have been throughout history committed to the art of building In this Building Theories argues for the return of a practice of architectural theory that is set amongst building buildings and builders This journey of close reading reinterprets the words

of Vitruvius Alberti de L Orme Le Camus de M zi res Boull e Laugier Rondelet Semper Viollet le Duc H bsch B tticher Berlage Muthesius Wagner Behrendt Gropius and Arup With chapters dedicated to texts from antiquity the Renaissance and the nineteenth century and with a critical eye on architectural theory popularized in the Anglo Saxon world post 1968 readers are introduced to a wider more inclusive definition of architectural ideas Building Theories considers how contemporary scholarship has steered away from the topic of building in its reluctance to admit that both design and construction are central to its concerns In response it argues for a realignment of architecture with the concept of techn with a dual commitment to fabrica e ratio with a productive return to l art de bien bastir with the accurate translation of the term Baukunst and with an appeal to the architect s composite mind Students practitioners and educators will identify in Building Theories ways of thinking that strive for the integration of design with construction reject the supposed primacy of the former over the latter recognize how aesthetics are an insufficient scaffold for subtending the subject of architectural ethics and accept without reservation that material transformations have always been at the origins of built form

Designer/builder ,2003 *Precedented Environmental Futures* Colin Porteous,2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment Detailing Worlds Eric Bellin,2025-02-06 In the 21st century the word detail appears constantly in discussions of building and we use it in many different ways yet just over 250 years ago detail meant nothing at all particular to the work of architects engineers or builders Detailing Worlds is the first book to examine the origins and evolution of detail as a concept with meanings specific to practices of building By exploring how past meanings and roles were ascribed to detail in different worlds of practice those of academics technicians students engineers and architects Detailing Worlds looks to the future illuminating the ways disciplinary knowledge and the concepts on which it is based evolve and change over time It is a story about how such concepts are slowly but constantly reconceived redefined and transformed by individuals as they interact with one another and how this process is shaped by the ever changing sociocultural and technological dimensions of the world around us Richly illustrated with more than 200 images including figures from rare texts archival student drawings and practitioners construction documents from the 18th through 20th centuries Detailing Worlds ventures to tell the history of a disciplinary specific idea and offer insights about how we think and speak about the practice of building today
