Relational Database Index Design and the Optimizers Tapio Lahdenmaki, Mike Leach, 2005-09-15 Improve the performance of relational databases with indexes designed for today's hardware Over the last few years hardware and software have advanced beyond all recognition so it's hardly surprising that relational database performance now receives much less attention Unfortunately the reality is that the improved hardware hasn't kept pace with the ever increasing quantity of data processed today Although disk packing densities have increased enormously making storage costs extremely low and sequential read very fast random reads are still painfully slow Many of the old design recommendations are therefore no longer valid the optimal point of indexing has come a long way Consequently many of the old problems haven't actually gone away they have simply changed their appearance This book provides an easy but effective approach to the design of indexes and tables Using lots of examples and case studies the authors describe how the DB2 Oracle and SQL Server optimizers determine how to access data and how CPU and response times for the resulting access paths can be quickly estimated This enables comparisons to be made of the various designs and helps you choose available choices for the most appropriate design This book is intended for anyone who wants to understand the issues of SQL performance or how to design tables and indexes effectively With this title readers with many years of experience of relational systems will be able to better grasp the implications that have been brought into play by the introduction of new hardware *Technical Manual* United States Department of the Army, 1969

Hydro-Environmental Analysis James L. Martin, 2013-12-04 Focusing on fundamental principles Hydro Environmental Analysis Freshwater Environments presents in depth information about freshwater environments and how they are influenced by regulation It provides a holistic approach exploring the factors that impact water quality and quantity and the regulations policy and management methods that are necessary to maintain this vital resource It offers a historical viewpoint as well as an overview and foundation of the physical chemical and biological characteristics affecting the management of freshwater environments The book concentrates on broad and general concepts providing an interdisciplinary foundation The author covers the methods of measurement and classification chemical physical and biological characteristics indicators of ecological health and management and restoration He also considers common indicators of environmental health characteristics and operations of regulatory control structures applicable laws and regulations and restoration methods The text delves into rivers and streams in the first half and lakes and reservoirs in the second half Each section centers on the characteristics of those systems and methods of classification and then moves on to discuss the physical chemical and biological characteristics of each In the section on lakes and reservoirs it examines the characteristics and operations of regulatory structures and presents the

methods commonly used to assess the environmental health or integrity of these water bodies It also introduces considerations for restoration and presents two unique aquatic environments wetlands and reservoir tailwaters Written from an engineering perspective the book is an ideal introduction to the aquatic and limnological sciences for students of environmental science as well as students of environmental engineering It also serves as a reference for engineers and scientists involved in the management regulation or restoration of freshwater environments Guide to the Archive of Art and Design, Victoria & Albert Museum Elizabeth Lomas, Archive of Art and Design (Great Britain), 2001 First Published in 2001 Routledge is an imprint of Taylor Francis an informa company **AI-Based Optimized Design of Structural**

Frames Won-Kee Hong, 2024-10-16 This book introduces an auto design based optimization for building frames using an artificial neural network ANN based Lagrange method and novel genetic algorithm GA The work of great mathematician Joseph Louis Lagrange and ANNs are merged to identify parameters that optimize structural frames of reinforced concrete prestressed concrete and steel frames subject to one or more design constraints New features for enhancing conventional GA are also demonstrated to optimize structural frames New features for optimizing multiple design targets of the building frames are highlighted while design requirements imposed by codes are automatically satisfied Chapters provide readers with an understanding of how both ANN based and novel GA based structural optimization can be implemented in holistically optimizing designated design targets for building structural frames guiding readers toward more rational designs that is consistent with American Institute of Steel Construction AISC and American Concrete Institute ACI standards ANN based holistic designs of multi story frames in general and reinforced concrete prestressed concrete and steel frames in particular are introduced This book suits structural engineers architects and graduate students in the field of building frame designs and is heavily illustrated with color figures and tables **Monthly Catalog of United States Government Publications**

, 1998 Reducing CO₂ and other emissions from shipping Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2009-06 The emission of greenhouse gases from shipping is a serious problem for international climate change policy and they cannot be allowed to grow uncontrolled The International Maritime Organization IMO has estimated that international shipping was responsible for annual emissions of around 843 million tonnes of carbon dioxide MtCO₂ in 2007 or around 3 per cent of total man made carbon emissions This report follows up an earlier inquiry Reducing carbon emissions from transport HC 981 I 9th report of session 2005 06 ISBN 9780215030412 and examines what efforts the Government is making in three main respects a negotiations to tackle shipping emissions at an international level within the IMO the UN Framework Convention on Climate Change and the EU b measures by which the UK is to take into account its share of international shipping emissions in domestic carbon budgets through the Climate Change Act 2008 and c support in the UK for operational improvements and technological R D aimed at reducing emissions from shipping Very little progress has been made at the international level A lack of urgency shown by industrialised nations and blocking actions by

developing economies share the blame The Government admits that the current calculation of the UK's share of international shipping emissions is an underestimate and should consult on how to improve the methodology it uses to calculate the UK's share of international shipping emissions Government support for research and development should focus on technologies that can be retrofitted to existing ships and offer a genuine alternative to fossil fuels such as hydrogen fuel cells There should be drastic acceleration of R D into low and zero carbon propulsion systems *Lens Design for Imaging* Herbert

Gross, 2026-01-20 Master the foundational principles that drive successful optical system design in modern imaging applications *Lens Design for Imaging Volume 1 Fundamentals of Optical Systems* by Herbert Gross delivers a comprehensive discussion of the theoretical foundations of optical systems Gross draws on his extensive industrial and academic experience in lens design to close the gap between purely theoretical examinations of lens design and practical application The author provides a systematic and robust methodology for lens design that guides you through the conceptual design analysis and optimization of complex imaging systems across diverse applications In this first volume the basic preconditions to understand optical imaging systems are presented The book covers twelve domains of optical system fundamentals from material properties and geometrical optics to advanced topics like diffraction theory Fourier optics and digital image processing Each chapter combines rigorous theory with illustrations and hands on examples making complex concepts accessible while maintaining the mathematical depth demanded by professional practice *Lens Design for Imaging Volume 1* encompasses the necessary knowledge and critical review about optical materials dispersion the geometrical optics approximation ray tracing methodologies component design principles imaging system theory physical optics effects and modern computational approaches Readers will also find Comprehensive coverage of optical materials including dispersion models in particular for short pulse systems absorption and thermal properties and specialized materials for UV IR and consumer applications Detailed ray tracing methods with complete equation sets for aspherical surfaces gradient media and diffractive elements Presentation of physical models for diffraction effects point spread functions and optical transfer functions of optical systems with practical calculation schemes with discussion of approximations and limitations Advanced topics including Gaussian beam propagation limits of Gaussian beam models photometric analysis and phase space representations for system analysis An integrated approach to digital imaging methods covering realistic image simulation enhancement techniques and modern imaging modalities Perfect for optical engineers lens designers and advanced students in optics and photonics *Lens Design for Imaging Volume 1* provides authoritative coverage of optical system fundamentals It contains the systematic knowledge practitioners and students require to tackle complex design challenges **Department of the Interior and Related Agencies Appropriations** United States.
