Social Research On Automation:

Social Research on Automation Philip Sadler, 1968 Soviet Research Institutes Project: The social sciences Blair A. Ruble, 1981 **Automation and Behaviour** John K. Chadwick-Jones, 1969 Social research study of psychological aspects of the effects of automation on employees attitude and behaviour in the UK with particular reference to the work environment in the iron and steel industry covers team work the impact of technological change on the industrial structure innovation job satisfaction promotion retirement working conditions incl Hours of work wages etc shift work managerial performance record supervisors etc References The Evolution of Industrial Systems Timothy Leggatt, 2018-10-31 This book first published in 1985 tackles simultaneously three major questions about the course of industrial evolution what are the features of the industrial systems that have developed outside Western capitalism What are the salient evolutionary developments now occurring in all advanced capitalist systems What light can social theory throw upon the evolution of industrial systems thus far and in the future In answering these questions the author provides an exposition of how the Soviet system works and how the Japanese system developed a critical analysis of three issues of major contemporary concern the control of giant corporations the impact of automation and the shift to service employment and a commentary on the theories of classical and contemporary social thinkers Concluding with his own conceptualisation of the determinants of industrial evolution the author also offers his own evaluation of the needs of the advanced industrial societies *The Machine at Work* Keith Grint, Steve Woolgar, 2013-06-28 This highly topical book is a concise and accessible account of the relationship between technology and work Firstly it reviews and critically assesses a variety of recent approaches to the social and cultural dimensions of technology Secondly it examines the implications of these new approaches for existing ideas about the nature of technology and work organization At the core of much thinking about technology is the assumption that the technical character and capacity of artefacts is given The enduring image of deus ex machina captures the idea that it is the essential capacity within a technology which in the end accounts for the way we organize ourselves our work and other life experiences Recent work in the sociology of technology by contrast sets out relativist and constructivist accounts of technology which begin to challenge this central assumption The Machine at Work includes a reinterpretation of the Luddites a review of the social processes of development in information technology a reassessment of theories of the role of technology in work and an analysis of the common limitations of some constructivist and feminist perspectives on technology The book argues that only a commitment to a particular conception of constructivism enables the kind of radical rethinking about technology and work relations that is needed This engaging and informative text will be of interest to students in a range of subject areas from sociology organizational theory and behaviour to industrial relations management and business studies **The Oxford Handbook of Digital Technology and Society** Simeon Yates, Ronald E. Rice, 2020 The Oxford Handbook of Digital Technology and Society will equip readers with the necessary starting points and provocations in the

fields of social science and technology so that students scholars and policy makers can effectively assess future research practice and policy Online Research Tristram Hooley,Rachel Buchanan,2024-04-18 First published Open Access under a Creative Commons license as What is Online Research this title is now also available as part of the Bloomsbury Research Methods series This book provides a concise and accessible introduction to online research covering ethics surveys focus groups ethnographies experiments and the gathering and analysis of naturally occurring digital big data It also asks how researchers should use the digital environment to communicate their research and looks forward to the future of the field asking what the next ten years hold Online research is rarely well served by the direct translation of onsite methods onto the internet Rather researchers need to reflect adapt and redesign research as they change the mode through which they conduct their research Featuring an updated glossary two new chapters and comprehensive updates throughout this new edition provides new and experienced researchers with the foundation they need to conduct online research projects A Bibliography of British History, 1914-1989 Keith Robbins,American Historical Association,Royal Historical Society (Great Britain),1996 Containing over 25 000 entries this unique volume will be absolutely indispensable for all those with an interest in Britain in the twentieth century Accessibly arranged by theme with helpful introductions to each chapter a huge range of topics is covered There is a comprehensive index **Rising Stars in Human-Robot Interaction** Bilge Mutlu,Ginevra Castellano,James Everett Young,Séverin Lemaignan,Adriana Tapus,2022-08-11 **Research in Education** ,1972

Department of Labor,1964 **Technology and the Future of Work** Paul S. Adler,1992 This book brings together a set of essays exploring the implications of new technologies in the workplace The common premise of the contributions is that the effective implementation of automation in manufacturing and engineering operations will typically require a workforce with a higher skill profile Examining the experience of countries in Europe Australia Asia and the U S the book analyzes four themes the new competencies required for effective implementation of new technologies how firms can develop these new competencies the implications of these changes for industrial relations and how firms can weave together business strategy technology strategy and personnel strategy to build competitive advantage with greater rather than lesser skills This argument contradicts the conventional assumption that automation will not only reduce the number of workers required to produce a given product but also require less skilled workers to do so *Electronic Government* Marijn Janssen,Csaba Csáki,Ida Lindgren,Euripidis Loukis,Ulf Melin,Gabriela Viale Pereira,Manuel Pedro Rodríguez Bolívar,Efthimios Tambouris,2022-08-30 Chapters 6 24 26 and 36 are available open access under a Creative Commons Attribution 4 0
