Investigating the Role of Emotions, Self-Centered Motives, and Social Norms Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr, 2016-09-28 Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic

development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one s interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also welcomed submissions of meta analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field

A Sociology of Special and Inclusive Education Sally Tomlinson,2017-02-24 A Sociology of Special and Inclusive Education brings sociological perspectives to bear on the social political and economic policies and practices that comprise special and inclusive education and the education of lower attainers Increasingly governments have accepted the premise that education should incorporate all social and ethnic groups especially those regarded as having special educational needs disabilities and difficulties in learning but despite a plethora of literature on special and inclusive education world wide governments are still unsure of the reasons for this sector s expansion in their national education systems Professor Tomlinson applies critical sociological perspectives to the social processes policies and practices that comprise special and inclusive education particularly in England and the USA She clearly examines the way in which people or groups exercise power and influence to shape this area of education and discusses the conflicts of interest that arise in resulting social interactions and relationships Key questions asked include Why and how has a whole sector of education dealing with young people regarded as having learning difficulties low attainments behaviour problems or disabilities developed How have special education programmes and resources become subsumed into variations of inclusive education Why have ideological beliefs in hierarchies of ability limits to learning potential and IQ as measurement continued to legitimate the treatment of young people What happens to young people after their special included or lower attainers programmes in terms of work and life chances A Sociology of Special and Inclusive Education will be of interest to a wide

range of educators professionals practitioners and policy makers concerned with special inclusive and vocational education in addition to undergraduate post graduate and research students and academics

Oxytocin's routes in social behavior: into the 21st century. "Precision Medicine" approach for Oxytocin Alaine Keebaugh, Elissar Andari, Lisa A. Parr, 2015-12-21

Our brain is endowed with an incredible capacity to be social to trust to cooperate to be altruistic to feel empathy and love Nevertheless the biological underpinnings of such behaviors remain partially hardwired Seminal research in rodents has provided important insights on the identification of specific genes in modulating social behaviors in particular the arginine vasopressin receptor and the oxytocin receptor genes These genes are involved in regulating a wide range of social behaviors mother infant interactions social recognition aggression and socio sexual behavior Remarkably we now know that these genes contribute to social behavior in a broad range of species from voles to humans Indeed advances in human non invasive neuroimaging techniques and genetics have enabled scientists to begin to elucidate the neurobiological basis of the complexity of human social behaviors using pharmacological fMRI and imaging genetics Over the past few years there has been a strong interest focused on the role of oxytocin in modulating human social behaviors with translational relevance for understanding neuropsychiatric disorders such as autism schizophrenia and depression in which deficits in social perception and social recognition are key phenotypes The convergence of this interdisciplinary research is beginning to reveal the complex nature of oxytocin's actions For instance the way that oxytocin does influence social functioning is highly related to individual differences in social experiences but also to the inter individual variability in the receptor distribution of this molecule in the brain Remarkably despite the increasing evidence that oxytocin has a key role in regulating human social behavior we still lack of knowledge on the core mechanisms of action of this molecule Understanding its fundamental actions is a crucial need in order to target optimal therapeutic strategies for human social disorders The originality of this Research Topic stands on its translational focus on bridging the gap between fundamental knowledge acquired from oxytocin research in voles and monkeys and recent clinical investigations in humans For instance what are the key animal findings that can import further knowledge on the mechanisms of actions of this molecule in humans What are the key experiences that can be performed in the animal model in order to answer significant science gaps in the treatment of neuropsychiatric disorders Hence within this Research Topic we will review the current state of the field identify where the gaps in knowledge are and propose directions for future research This issue will begin with a comparative review that examines the role of this peptide in diverse animal models which highlights the adaptive value of oxytocin's function across multiple species Then a series of reviews will examine the role of oxytocin in voles primates and humans with an eye toward revealing commonalities in the underlying brain circuits mediating oxytocin's effects on social behavior Next there will be a translational review highlighting the evidence for oxytocin's role in clinical applications in psychopathology Hence via the continuum of basic to translational research areas we will try to address the important gaps in our understanding of the neurobiological routes of social

cognition and the mechanisms of action of the neuropeptides that guide our behaviors and decisions *Neutrosophic Sets and Systems, Vol. 26, 2019. Special Issue: Social Neutrosophy in Latin America* Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva Vazquez, The Latin American Neutrosophic Science Association was created in 2018 as a result of the initiative of a group of university professors from Mexico and Ecuador The Association has developed an intense work in the investigative context expression of the capacity that neutrosophy has as a tool for understanding and transformation of reality in social benefit Neutrosophic sets as a generalization fuzzy set especially intuitionistic fuzzy sets allows handling a greater number of situations that occur in reality and becomes a facilitator of the approach to the studied object without undermining its complex and multivariate essence In this special edition researchers from six Ecuadorian universities show the results of research projects addressing a wide range of topics related to the social environment of these Higher Education Institutions The contents include law criminology public and administrative management evaluation of pedagogical scenarios prospective analysis artificial intelligence among other topics They are many different texts with a common denominator the social sciences and their relationship with neutrosophy The progress of these investigations originates a significant change in the ways of validating and reasoning the proposals the appreciation of neutrality increases the interpretability and the inferential efficacy from the analysis of the results which enunciates a methodological perceptive and objective enrichment in the humanistic sciences in Latin American geographical region *Social Behaviour in Animals* J. Tinbergen, 2012-12-06 HIS book is not intended as an exhaustive review T of facts Its aim is rather the presentation of a biological approach to the phenomena of social behaviour This type of approach was revived by Lorenz s pioneer studies It is characterized by emphasis on the need for renewed and careful observation of the huge variety of social phenomena occurring in nature by emphasis on a balanced study of the three main biological problems function causation evolution by emphasis on an appropriate sequence of description qualitative analysis quantitative analysis and finally by emphasis on the need for continuous re synthesis The character of this approach combined with the limitations of space have determined this book s contents Limits of space led to the omission of a great deal of description Thus Deegener s voluminous work on the multitude of types of animal aggregations has not been discussed Also the highly specialized states of social insects have not been treated in detail since there are excellent books dealing exclusively with them **Encyclopedia of Special Education, Volume 3** Cecil R.
