The Defense Industry:

The Structure of the Defense Industry Nicole Ball, Milton Leitenberg, 2021-05-30 Proponents of arms control and disarmament are often confronted with the argument that reductions in defense expenditure lead to cutbacks in military industries and thus to economic hardship While a reduction in defense production would cause some economic dislocation this would be mitigated by the ability of the economy to adapt to changing patterns of production This book first published in 1983 assesses the likely effects of reductions in defense industries by an examination of the roles these industries play in national economies Each chapter discusses industry employment output research and development capital value profitability concentration and competition internal organization and regional employment concentration Other questions considered include the economic importance of weapons exports the defense industry as a leading edge in maintaining national technological capabilities and the reliance of individual firms on defense contracting

Military transformation and the defense industry after next the defense industrial implications of network-centric warfare , *The Structure of the Defense Industry. An International Survey* Nicole Ball, 1985 **The Modern Defense Industry** Richard A.

Bitzinger, 2009-10-15 Whether it's guns and ammunition or multidimensional anti terrorism systems the defense industry is dynamic complex and ubiquitous It is also mysterious powerful and controversial involving thousands of players worldwide from suppliers and producers to government and military procurers to shadowy figures that trade in the black market This comprehensive two volume reference will explore on a global scale the various issues concepts problems and controversies surrounding the rise of the modern defense industry Unparalleled in its scope and insight The Modern Defense Industry will prove invaluable to the industry's critics and champions alike The phenomenon of a more or less permanent defense industry especially one so wide in scale breadth air sea land and space technology and geography is still relatively new Until now its implications for politics economics and technology have not been adequately discussed in an authoritative accessible format for scholars and researchers business people journalists policymakers and interested laymen The Modern Defense Industry addresses the period from 1945 to the present covering the United States Europe Russia China Israel and other important arms producing and arms procuring countries Including essays by experts from around the world a glossary data on firms and governments laws and policies primary documents case studies and a host of other elements this set will be a unique resource for anyone interested in the arms industry It will also offer penetrating insights into topics like international relations and diplomacy arms proliferation and contemporary politics Volume I comprises chapters by experts in the field on topics like the relationship between the industry military and government how new modes of warfare are changing the industry the implications of globalization on the industry the black and gray areas of the arms trade and much more Volume II features an extensive A Z glossary of terms lists of defense firms and government agencies annotated primary documents lists of leading defense contractors and key weapons systems an analysis of key legislation and professional organizations

The Modern Defense Industry sets the standard for state of the art overviews of an industry that has for better or worse come to infuse nearly every aspect of world affairs in the early twenty first century Military Transformation and the Defense Industry After Next: the Defense Industrial Implications of Network-Centric Warfare Peter J. Dombrowski, Eugene Gholz, Andrew L. Ross, Naval War College Press, 2012-08-09 Though still adjusting to the end of the Cold War the defense industry is now confronted with the prospect of military transformation Since the terrorist attacks on 11 September 2001 many firms have seen business improve in response to the subsequent large increase in the defense budget But in the longer run the defense sector s military customers intend to reinvent themselves for a future that may require the acquisition of unfamiliar weapons and support systems Joint and service visions of the military after next raise serious questions that require the attention of the Defense Department s civilian and uniformed leadership and industry executives alike What are the defense industrial implications of military transformation Will military transformation lead to major changes in the composition of the defense industrial base This study employs network centric warfare a Navy transformation vision that is being adopted increasingly in the joint world as a vehicle for exploring the defense industrial implications of military transformation We focus on three defense industrial sectors shipbuilding unmanned vehicles and systems integration The transformation to NCW will require both sustaining and disruptive innovation that is innovation that improves performance measured by existing standards and innovation that defines new quality metrics for defense systems The dominant type of innovation needed to support transformation varies across industrial sectors some sectors face more sustaining than disruptive innovation while some sectors will need more disruptive than sustaining innovation as they supply systems for the Navy after Next Military transformation does not entail wholesale defense industrial transformation In the systems integrations sector much of the innovation required to effect networkcentric warfare is likely to be sustaining rather than disruptive In the parts of the defense industrial base that build platforms on the other hand the standards by which proposals are evaluated for the Navy after Next will be somewhat different than the standards used in the past As a result transformation could significantly change the industrial landscape of shipbuilding The unmanned vehicle sector falls somewhere in between because unmanned vehicles have not been acquired in quantity in the past their performance metrics are not well established Existing suppliers of unmanned vehicles will have a role in the future industry but some innovative concepts and technologies may come from nontraditional suppliers such as start up firms The U S Navy bears the responsibility of transforming itself Internally it must find ways to deconflict the needs of the current Navy and the Next Navy from the needs of the Navy after Next if industry is to support its long term transformation requirements Externally pervasive organizational and political obstacles to transformation require that the Navy carefully manage its relationships with Congress and industry Recognition that military transformation need not drive existing defense firms out of business will facilitate that task **The Defense Industrial Base** United States. Panel on Business Challenges within the Defense Industry,2012 Defence Industries in the 21st Century Çağlar Kurç,Richard A. Bitzinger,Stephanie G. Neuman,2021-05-13 Defence Industries in the 21st Century explores the transformation in the global defence industrial production through examining the interaction between international and domestic factors With the global defence industry and arms market likely continue to expand and mature the ways in which this progression could influence international politics remain obscure In practice as the contents of this book show the defence industrial bases and arms export policies of emerging states display significant variance This variance is the result of a unique balance between domestic and international factors that has shaped the defence industrialisation behaviour and policies of the less industrialised states One of the most important conclusions of the book is that the interplay between domestic and international factors clearly influences the variation in the emerging states defence industrialisation policies as well as their success or failure While international factors create opportunities they also limit the options available to emerging economies Domestic factors also play an important role by shaping the policy choices of the states decision makers Exploring the balance between international and domestic factors and the ways in which they influence defence industrialisation in emerging states Defence Industries in the 21st Century will be of great interest to scholars of Defence Industries Arms Manufacturing and Defence Strategic and Security Studies more generally The chapters were originally published in Defence Studies Comparative Strategy and All Azimuth Arms and Innovation James Hasik,2008-09-15 With many of the most important new military systems of the past decade produced by small firms that won competitive government contracts defense industry consultant James Hasik argues in Arms and Innovation that small firms have a number of advantages relative to their bigger competitors Such firms are marked by an entrepreneurial spirit and fewer bureaucratic obstacles and thus can both be more responsive to changes in the environment and more strategic in their planning This is demonstrated Hasik shows by such innovation in military technologies as those that protect troops from roadside bombs in Iraq and the Predator drones that fly over active war zones and that are crucial to our new war on terror For all their advantages small firms also face significant challenges in access to capital and customers To overcome such problems they can form alliances either with each other or with larger companies Hasik traces the trade offs of such alliances and provides crucial insight into their promises and pitfalls This ground breaking study is a significant contribution to understanding both entrepreneurship and alliances two crucial factors in business generally It will be of interest to readers in the defense sector as well as the wider business community **Democracy's Arsenal** Jacques S. Gansler,2013-08-16 An expert explains why the security needs of the twenty first century require a transformation of the defense industry of the twentieth century New geopolitical realities including terrorism pandemics rogue nuclear states resource conflicts insurgencies mass migration economic collapse and cyber attacks have created a dramatically different national security environment for America Twentieth century defense strategies technologies and industrial practices will not

meet the security requirements of a post 9 11 world In Democracy s Arsenal Jacques Gansler describes the transformations needed in government and industry to achieve a new more effective system of national defense Drawing on his decades of experience in industry government and academia Gansler argues that the old model of ever increasing defense expenditures on largely outmoded weapons systems must be replaced by a strategy that combines a healthy economy effective international relations and a strong but affordable national security posture The defense industry must remake itself to become responsive and relevant to the needs of twenty first century security **The Defense Industrial Base** United States.
