Super Structures:

Super Structures Mark Denny, 2010-06-07 An extraordinary guide to the hidden secrets of modern man made miracles Highly recommended from the author of Froth The Science of Beer Midwest Book Review Ever wonder how a graceful and slender bridge can support enormous loads over truly astonishing spans Why domes and free standing arches survive earthquakes that flatten the rest of a city Physicist Mark Denny looks at the large structures around us tall buildings long bridges and big dams and explains how they were designed and built and why they sometimes collapse topple or burst Denny uses clear accessible language to explain the physics behind such iconic structures as the Parthenon the Eiffel Tower the Forth Rail Bridge in Edinburgh and Hoover Dam His friendly approach allows readers to appreciate the core principles that keep these engineering marvels upright without having to master complex mathematical equations Employing history humor and simple physics to consider such topics as when to use screws or nails what trusses are why iron beams are often I shaped and why medieval cathedrals have buttresses Denny succeeds once again in making physics fun Praise for Mark Denny Denny's wry humor is fun to read and made me laugh out loud Mark Kidger author of Astronomical Enigmas Denny largely sheds the complexity of mathematical constructs distilling their most salient features into a more qualitative understanding of radar and sonar systems Choice Indeed Denny's writing is anything but dry and boring He adeptly explains complex subject matter and does so with relatively simple language and minimal use of symbolic notation Bat Research News

shows in a pragmatic way using 24 examples spread all over the world how leading designers use this methodology to select from the many possibilities to arrive at an ideal solution taking into account all design conditions One often reads that experience is a necessary condition for good conceptual design The pooled knowledge and experience in this bulletin already provide the reader with a good head start Commission 6 thanks the former convener of the Task Group Hugo Correa editor of this document and the current co conveners Marcello Waimberg and Ken ichi Kata as well as all active members of the Task Group for sharing their knowledge and experience and for the successful realization of this bulletin
