Supercooled Liquid, Bulk Glassy and Nanocrystalline States of Alloys: Volume 644 Akihisa Inoue, 2001-10-05 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners

Supercooled Liquid, Bulk Glassy and Nanocrystalline States of Alloys: Akihisa Inoue, Alain Reza Yavari, William L. Johnson, Reinhold H. Dauskardt, 2014-06-05 Since nanocrystallites are often formed as a product of devitrification of metallic glasses and supercooled liquid plays an essential role in bulk glass formation recent research pertaining to these three states of alloys were brought together for discussion into a single MRS symposium Bulk glassy and bulk nanocrystalline alloys are important because they demonstrate exclusively good static and dynamic mechanical properties magnetic properties and good corrosion and wear resistance Some of these alloys also exhibit superplasticity including high strain rate flowability The reports in this book span formation and processing methods of bulk glassy nanocrystalline alloys glass forming ability and thermal stability devitrification and phase transformations properties general physical mechanical magnetic electrical and corrosion resistance structure of bulk glasses supercooled liquid and nanomaterials and diffusion Topics include atomic and electronic structure glass forming ability and thermal stability crystallization and decomposition quasicrystals soft magnetic properties hard magnetism and mechanical and other properties Bulk Metallic Glasses C. Suryanarayana, A.

Inoue, 2011-06-03 In spite of the large amount of research activity in this subfield of materials science and engineering there is no single book available that provides background information methods of synthesis characterization procedures properties and potential and existing applications of bulk metallic glasses Written in an easy to understand style by pioneering researchers in this field Bulk Metallic Glasses is one of the first books to coherently discuss the synthesis processing properties and applications of these unique materials The book explores the differences between nanocrystalline glassy and amorphous solids as well as the thermodynamics and kinetics and various processing methods of glass formation It critically compares the different criteria for glass formation describes the advantages and limitations of experimental methods for synthesizing bulk metallic glasses in assorted sizes and shapes and examines the kinetics of crystallization devitrification and the mechanisms of transformations It also covers the density diffusivity thermal expansion electrical resistivity specific heat viscosity corrosion resistance mechanical behavior and magnetic properties of bulk metallic glasses After presenting a wide array of applications the book concludes with a discussion on the future of these materials The adoption of bulk metallic glasses into existing systems is besieged by many obstacles but due to their interesting combination of properties future applications may be unlimited A one stop resource on all aspects of bulk metallic glasses this book demonstrates the immense potential of these novel materials It clearly elucidates the background detailed methods of synthesis and characterization structure and properties of bulk metallic glasses □□□□□□□□3□:□□□□□□□□□□ David J. Sellmyer, Yi Liu, 2005 Metastable Solids from Undercooled Melts Dieter Herlach, Dirk Holland-Moritz, Peter

Galenko,2006-12-18 This book presents the physical concepts and tools to characterize and describe the formation of metastable solids from undercooled melts Its aim is to facilitate understanding of the development of the science and technology of solidification of melts and to introduce new concepts within this exciting research field in order to fulfil the challenges of the future in the field of undercooled melts A comprehensive description of the science and applications of the undercooling phenomenon is given It is composed of several main parts experimental techniques for undercooling characterization of the undercooled melt as the first step in rapid solidification introducing the concepts of modern theories of rapid dendrite and eutectic growth and their comparison with experimental results and a survey of metastable materials formed from the non equilibrium state of an undercooled melt Showing clear links to possible application of results obtained from basic research The subject matter is multidisciplinary and will be of interest to material scientists physicists physical chemists mechanical and electrical engineers *Metastable, Mechanically Alloyed and Nanocrystalline Materials* 2003 C.S. Supercooled Liquids, Glass Transition and Bulk Metallic Glasses: Volume 754 Takeshi Egami,2003-07-16 There has been a renaissance in glass science brought about by the development of concepts such as fragility index and the energy landscape with megabasins Research on bulk metallic glasses has been explosive since their advent when MRS offered its first book on the topic In 2000 a second book broadened the scope to include supercooled liquid bulk glassy and nanocrystalline states This book enhances the scope to include glass transition in diverse materials such as water silicate and polymeric melts Bringing these threads together in an interdisciplinary manner was fruitful and offers proof that while there is much common ground gaps between various approaches to the glassy state remain to be bridged Subjects include the supercooled liquid glass formability structural relaxation and dynamics structure determination and modeling processing and applications of bulk metallic glasses mechanical properties mechanical properties composites crystallization electronic and magnetic structure and properties and nanoparticles and nonmetallic glasses *Metastable, Mechanically Alloyed and Nanocrystalline Materials* (2000) Peter Schumacher,Paul Warren,Brian Cantor,2001-01-23 ISMANAM 2000 Proceedings of the International Symposium on Metastable Mechanical Alloyed and Nanocrystalline Materials ISMANAM 2000 Oxford UK July 9 14 2000 **Proceedings of the Japan Academy** Nihon Gakushiin,2005 **Materials Transactions, JIM.** ,2006
