Supercritical Carbon Dioxide Maartje F. Kemmere,Thierry Meyer,2006-05-12 Recently supercritical fluids have emerged as more sustainable alternatives for the organic solvents often used in polymer processes This is the first book emphasizing the potential of supercritical carbon dioxide for polymer processes from an engineering point of view It develops a state of the art overview on polymer fundamentals polymerization reactions and polymer processing in supercritical carbon dioxide The book covers topics in a multidisciplinary approach starting from polymer chemistry and thermodynamics going through monitoring polymerization processes and ending with polymer shaping and post processing The authors are internationally recognized experts from different fields in polymer reaction engineering in supercritical fluids The book was initiated by the Working Party on Polymer Reaction Engineering of the European Federation of Chemical Engineering and further renowned international experts

Polymer Reaction Engineering of Dispersed Systems Werner Pauer,2018-11-19 The series Advances in Polymer Science presents critical reviews of the present and future trends in polymer and biopolymer science It covers all areas of research in polymer and biopolymer science including chemistry physical chemistry physics material science The thematic volumes are addressed to scientists whether at universities or in industry who wish to keep abreast of the important advances in the covered topics Advances in Polymer Science enjoys a longstanding tradition and good reputation in its community Each volume is dedicated to a current topic and each review critically surveys one aspect of that topic to place it within the context of the volume The volumes typically summarize the significant developments of the last 5 to 10 years and discuss them critically presenting selected examples explaining and illustrating the important principles and bringing together many important references of primary literature On that basis future research directions in the area can be discussed Advances in Polymer Science volumes thus are important references for every polymer scientist as well as for other scientists interested in polymer science as an introduction to a neighboring field or as a compilation of detailed information for the specialist Review articles for the individual volumes are invited by the volume editors Single contributions can be specially commissioned Readership Polymer scientists or scientists in related fields interested in polymer and biopolymer science at universities or in industry graduate students

Polymer Reaction Engineering Jose Asua,2008-04-15 Polymers are an example of products by process where the final product properties are mostly determined during manufacture in the reactor An understanding of processes occurring in the polymerization reactor is therefore crucial to achieving efficient consistent safe and environmentally friendly production of polymeric materials Polymer Reaction Engineering provides the link between the fundamentals of polymerization kinetics and polymer microstructure achieved in the reactor Organized according to the type of polymerization each chapter starts with a description of the main polymers produced by the particular method their key microstructural features and their applications Polymerization kinetics and its effect on reactor configuration mass and energy balances and scale up are covered in detail
