Supramolecular Control Of Structure And Reactivity:

Supramolecular Control of Structure and Reactivity Andrew D. Hamilton, 2008-04-30 This volume concentrates on catalysis in biochemical environments giving new perspectives to previous research current developments and future directions Topics range from micelles performing catalytic reactions active sites on heme proteins and synthetic control of oligonucleotide structures to design of proteins self assembling structures and self replicating molecules A comprehensive survey of the literature on supramolecular chemistry for 1993-94 is also included *Molecular Self-Assembly* Makoto Fujita, 2003-09-04 Self assembly is undoubtedly a topic of special interest in current chemistry and is related to very wide scientific areas Recent progress in this field seems to be featured by the construction of well defined discrete systems exploiting complementary hydrogen bonding as well as coordination bonding Seven leading international experts introduce the current topics in this very interesting field focusing on two major subjects organic assemblies and inorganic assemblies All researchers who are interested in molecular recognition material science nanotechnology and supramolecular chemistry will welcome this book as an inspiring source for creative research ideas **Protein-Ligand Interactions** Hans-Joachim Böhm, Gisbert Schneider, 2006-03-06 The lock and key principle formulated by Emil Fischer as early as the end of the 19th century has still not lost any of its significance for the life sciences The basic aspects of ligand protein interaction may be summarized under the term molecular recognition and concern the specificity as well as stability of ligand binding Molecular recognition is thus a central topic in the development of active substances since stability and specificity determine whether a substance can be used as a drug Nowadays computer aided prediction and intelligent molecular design make a large contribution to the constant search for e.g. improved enzyme inhibitors and new concepts such as that of pharmacophores are being developed An up to date presentation of an eternally young topic this book is an indispensable information source for chemists biochemists and pharmacologists dealing with the binding of ligands to proteins **Bioinorganic Catalysis** Jan Reedijk, Elisabeth Bouwman, 1999-02-02 Provides the latest research results and suggests new topics for interdisciplinary study of metal ions catalysis and biochemical systems Second Edition highlights potential applications includes new chapters on zinc and FeS clusters presents new X-ray analysis of metalloenzymes and more **The Weak Hydrogen Bond** Gautam R. Desiraju, Thomas Steiner, 2001 The weak or non-conventional hydrogen bond has been subject of intense scrutiny over recent years in several fields in particular in structural chemistry structural biology and also in the pharmaceutical sciences There is today a large body of experimental and theoretical evidence confirming that hydrogen bonds like C-H...O N-H... π C-H... π and even bonds like O-H...metal play distinctive roles in molecular recognition guiding molecular association and in determining molecular and supramolecular architectures The relevant compound classes include organometallic complexes organic and bio-organic systems and also DNA and proteins The book provides a comprehensive assessment of this interaction type and is of interest to all those interested in structural and supramolecular science including fields as crystal

engineering and drug design **The Porphyrin Handbook, Volume 5** Karl Kadish, Kevin M. Smith, Roger Guilard, 1999-10-15 Scientists in such fields as mathematics physics chemistry biochemistry biology and medicine are currently involved in investigations of porphyrins and their numerous analogues and derivatives Porphyrins are being used as platforms for the study of theoretical principles as catalysts as drugs as electronic devices and as spectroscopic probes in biology and medicine The need for an up to date and authoritative treatise on the porphyrin system has met with universal acclaim amongst scientists and investigators Streamlining Free Radical Green Chemistry V. Tamara Perchyonok, Ioannis Lykakis, Al Postigo, 2012 The environmental and health hazards created by industrial chemicals and consumer products must be minimized For safer products to be designed the relationships between structure and toxicity must be understood at the molecular level Green chemistry combined with free radical research has the potential to offer innovative solutions to such problems Some solutions are greener than others and many necessitate significant financial investment New technology will only be adopted if real benefit can be shown and sometimes adaptation of existing methods is the best option The efficiency of processes must be assessed not only in terms of the final yield but also cost environmental impact and waste toxicity This practical and concise guide showcases the sustainable methods offered by green free radical chemistry and summarizes the fundamental science involved It discusses the pros and cons of free radical chemistry in aqueous systems for synthetic applications All transformation steps are covered including initiation propagation and termination Useful background knowledge is combined with examples including industrial scale processes for pharmaceuticals and fine chemicals The book helps chemists to choose appropriate methods for achieving maximum output using a modern environmentally conscious approach It shows that armed with an elementary knowledge of kinetics an understanding of the mechanistic and technical aspects and some common sense it is possible to harness free radicals for use in a broad range of applications Streamlining Green Free Radical Chemistry is aimed at chemists engineers materials scientists biochemists and biomedical experts as well as undergraduate and postgraduate students It encourages readers to question conventional methods and move towards the Benign by Design approach of the future References to further reading are provided at the end of each chapter

Activating Unreactive Substrates Carsten Bolm, F. Ekkehardt Hahn, 2009-03-02 The use of secondary interactions for the activation of non reactive substrates constitutes a new and modern approach in catalysis This first comprehensive treatment of this important research field covers the entire field and reveals the links between the various chemical disciplines It thus adopts an interdisciplinary approach making it of interest to the whole chemical community A must for organic inorganic catalytic and complex chemists as well as those working with on organometallics Molecular Recognition and Inclusion A.W. Coleman, 2012-12-06 This volume contains the Proceedings of the Ninth International Symposium on Molecular Recognition and Inclusion ISMRI 9 which was held in Lyon France during 7 to 12 September 1996 The articles reflect the over 50 oral presentations and 140 posters which were presented at ISMRI 9 both in the range of

topics and also in the layout of the volume which comprises five sections Plenary Invited Oral and Emerging Lectures and the four poster sessions Some words should be said about the Emerging lectures these were a means of allowing young scientists often doctoral students to present short 15 minute talks on their work and were one of the great scientific successes of ISMRI 9 I would again like to thank the presenters of these lectures for their contributions The scientific content of ISMRI 9 reflected the logo of the conference showing the symbiotic interactions between Chemistry Physics and Biology which contribute so strongly to the inter and pluridisciplinary nature of Supramolecular Science The topics ranged from Glycobiology through Membrane Systems through Synthetic Organic and Inorganic Chemistry to the construction of Complex Edifices in solution and the Solid State to arrive at the Physics of Molecular Interactions via the understanding of Water and Gas Clathrates Once more to all the speakers who use the breadth of the subjects thank you

Metal Ions in Biological Systems Astrid Sigel, 2001-01-30 Focuses on the vibrant area of probing enzymes or proteins by metal ions and small complexes Offers a summary of the basic characteristics of the amide bond emphasizing its proton and metal ion interactions including a quantitative analysis of its hydrolysis and formation
