interactions of light with inorganic species in natural systems and the applications in artificial systems of medical or environmental importance form the basis of this challenging inter disciplinary research area Bioinorganic Photochemistry provides a comprehensive overview of the concepts and reactions fundamental to the field illustrating important applications in biological medical and environmental sciences Topics covered include Cosmic and environmental photochemistry Photochemistry of biologically relevant nanoassemblies Molecular aspects of photosynthesis Photoinduced electron transfer in biosystems Modern therapeutic strategies in photomedicine The book concludes with an outlook for the future of environmental protection discussing emerging techniques in the field of pollution abatement and the potential for bioinorganic photochemistry as a pathway to developing cheap environmentally friendly sources of energy Written as an authoritative guide for researchers involved in the development of bioinorganic photochemical processes Bioinorganic Photochemistry is also accessible to scientists new to the field and will be a key reference source for advanced courses in inorganic and bioinorganic chemistry

Organic Molecular Photochemistry V. Ramamurthy, Kirk S. Schanze, 2020-08-13 Focuses on complex naturally occurring and synthetic supramolecular arrays The text describes applications of photochemistry in crystalline organic matrices covers two component crystals crystalline molecular compounds mixed crystals and simple mechanical mixtures in solid and liquid phases assesses photoinduced fragmentation of carbon heteroatom bonds and more

Organic Photochemistry V. Ramamurthy, 1997-06-26 Features surveys of all areas of organic inorganic physical and biological photochemistry The text serves as a source of scientific findings pertinent to chemistry and biochemistry It addresses the state of developments in the field employing reviews of active research including recent innovations techniques and applications

Photochemistry Angelo Albini, Elisa Fasani, 2016-10-03 Providing critical reviews of recent advances in photochemistry including organic and computational aspects the latest volume in the Series reflects the current interests in this area It also includes a series of highlights on molecular devices global artificial photosynthesis silicon nanoparticles solar energy conversion organic heterogeneous photocatalysis and photochemistry in surface water environments Volume 44 of the annual Specialist Periodical Reports Photochemistry is essential reading for anyone wishing to keep up with the literature on photochemistry and its applications

Photoprocesses in Transition Metal Complexes, Biosystems and Other Molecules. Experiment and Theory Elise Kochanski, 1992 The main emphasis in this book is on the photoprocesses of transition metal complexes and biosystems but not to the exclusion of other photoprocesses The book will thus be useful to a wide range of researchers Beginning with a basic introduction to photophysics quantum chemistry and the spectroscopic techniques used for the study of organometallic intermediates and biliproteins the book goes on to discuss the photochemistry of organometallics special attention being paid to the photochemistry of metalbonded carbonyls and polynuclear systems in supramolecular photochemistry After moving to a discussion of large systems the book then develops some aspects of the photophysics of biosystems before closing with a discussion of artificial photosynthetic model systems

Chiral Photochemistry Yoshihisa Inoue, V. Ramamurthy, 2004-08-30 Control of molecular chirality is central to contemporary chemistry biology and materials related areas Chiral photochemistry employs molecular and supramolecular chiral interactions in the electronically excited state to induce molecular chirality providing new and versatile strategies and surprising results unattainable by conventional thermal
