Doomsday Men P. D. Smith, 2024-09-04 The gripping untold story of the doomsday bomb the ultimate weapon of mass destruction Chillingly compelling New Scientist In 1950 Hungarian born scientist Leo Szilard made a dramatic announcement on American radio science was on the verge of creating a doomsday bomb For the first time in history mankind realized that he had within his grasp a truly God like power the ability to destroy life itself The shockwave from this statement reverberated across the following decade and beyond If detonated Szilard s doomsday device a huge cobalt clad H bomb would pollute the atmosphere with radioactivity and end all life on earth The scientific creators of such apocalyptic weapons had transformed the laws of nature into instruments of mass destruction and for many people in the Cold War there was little to distinguish

real scientists from that fictional master of megadeath Stanley Kubrick's *Dr Strangelove*. Indeed as P D Smith's chilling account *Doomsday Men* shows the dream of the superweapon begins in popular culture. This is a story that cannot be told without the iconic films and fictions that portray our deadly fascination with superweapons from H G Wells's *The War of the Worlds* to Nevil Shute's *On the Beach* and Kubrick's *Dr Strangelove* or *How I Learned to Stop Worrying and Love the Bomb*. Although scientists admitted it was possible to build the cobalt bomb no superpower would admit to having created one. However it remained a terrifying possibility striking fear into the hearts of people around the world. The story of the cobalt bomb is an unwritten chapter of the Cold War but now P D Smith reveals the personalities behind this feared technology and shows how the scientists responsible for the twentieth century's most terrible weapons grew up in a culture dreaming of superweapons and Wellsian utopias. He argues that in the end the doomsday machine became the ultimate symbol of humanity's deepest fears about the science of destruction. Weaving together biography science and art Smith has created a compelling history of physics in the twentieth century focusing on the long lasting search for ever more destructive weapons from the development of chemical warfare in World War I Germany through the arms race of the Cold War. Captivating and thoroughly referenced this chronicle should interest a wide audience from science and history buffs to armchair politicians.

Publishers Weekly Nanoscience Education, Workforce Training, and K-12 Resources Judith Light Feather, Miquel F. Aznar, 2018-10-08 The nanotech revolution waits for no man woman or child. To revitalize science technology engineering and mathematics STEM performance the U S educational system requires a practical strategy to better educate students about nanoscale science and engineering research. This is particularly important in grades K 12 the effective gestation point for future ideas and information. Optimize your use of free resources from the National Science Foundation. The first book of its kind *Nanoscience Education Workforce Training and K 12 Resources* promotes nano awareness in both the public and private sectors presenting an overview of the current obstacles that must be overcome within the complex U S educational system before any reform is possible. It's a race against time and other countries and the fear is that U S students could lag behind for decades with ineffective teaching and learning methods handicapping their ability to compete globally. Focusing on the application of new knowledge this concise and highly readable book explores the transdisciplinary nature of nanoscience and its societal impact also addressing workforce training and risk management. Illustrating the historical perspective of the complexity of K 12 education communities it defines nanotechnology and evaluates pertinent global and national landscapes presenting examples of successful change within them. This book is composed of four sections. *Foundations* addresses the national educational matrix exploring the scientific and social implications associated with the delay in adopting nanoscience education in public schools. *Teaching Nanotechnology* discusses the critical process of teaching K 12 students the skills to understand and evaluate emerging technologies they will encounter. *Nanoscience Resources and Programs* provides a wide overview of the resources offered by funded outreach programs from universities.

with nanoscience centers Framework Applied analyzes the structure of national government programs and skill level recommendations for nanoeducation from the National Nanotechnology Initiatives This book offers plans of action and links to sustainable largely free development tools to help K 12 students acquire the skills to understand and evaluate emerging technologies Promoting a holistic teaching approach that encompasses all aspects of science the authors strive to help readers implement change so that decisions about resources and learning are no longer made from the top down by policymakers but rather from the bottom up by teachers parents and students at the local level Akhlesh Lakhtakia one of the contributors to this volume was recently featured on CNN in a discussion on solar energy

Eurekas and Euphorias Walter Gratzer, Walter Bruno Gratzer, 2004 The march of science has never proceeded smoothly It has been marked through the years by episodes of drama and comedy of failure as well as triumph by outrageous strokes of luck deserved and undeserved and sometimes by human tragedy It has seen deep intellectual friendships as well as ferocious animosities and once in a while acts of theft and malice deceit and even a hoax or two Scientists come in all shapes the obsessive and the dilettantish the genial the envious the preternaturally brilliant and the slow witted who sometimes see further in the end the open minded and the intolerant recluses and arrivistes From the death of Archimedes at the hands of an irritated Roman soldier to the concoction of a superconducting witches brew at the very close of the twentieth century the stories in *Eurekas and Euphorias* pour out told with wit and relish by Walter Gratzer Open this book at random and you may chance on the clumsy chemist who breaks a thermometer in a reaction vat and finds mercury to be the catalyst that starts the modern dyestuff industry or a famous physicist dissolving his gold Nobel Prize medal in acid to prevent it from falling into the hands of the Nazis recovering it when the war ends mathematicians and physicists diverting themselves in prison cells and even in a madhouse by creating startling advances in their subject We witness the careers sometimes tragic sometimes carefree of the great women mathematicians from Hypatia of Alexandria to Sophie Germain in France and Sonia Kovalevskaya in Russia and Sweden and then Marie Curie s relentless battle with the French Academy Here then a glorious parade unfolds to delight the reader with stories to astonish to instruct and most especially to entertain

The First War of Physics Jim

Baggott, 2011-08-15 An epic story of science and technology at the very limits of human understanding the monumental race to build the first atomic weapons Rich in personality action confrontation and deception *The First War of Physics* is the first fully realized popular account of the race to build humankind s most destructive weapon The book draws on declassified material such as MI6 s Farm Hall transcripts coded soviet messages cracked by American cryptographers in the Venona project and interpretations by Russian scholars of documents from the soviet archives Jim Baggott weaves these threads into a dramatic narrative that spans ten historic years from the discovery of nuclear fission in 1939 to the aftermath of Joe 1 August 1949 s first Soviet atomic bomb test Why did physicists persist in developing the atomic bomb despite the devastation that it could bring Why despite having a clear head start did Hitler s physicists fail Could the soviets have developed the

bomb without spies like Klaus Fuchs or Donald Maclean Did the allies really plot to assassinate a key member of the German bomb program Did the physicists knowingly inspire the arms race The First War of Physics is a grand and frightening story of scientific ambition intrigue and genius a tale barely believable as fiction which just happens to be historical fact

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics *Quantum Gravity and the Standard Model* Nigel Cook,
