Laser Modification of the Wettability Characteristics of Engineering Materials (Engineering Materials Series ERS Publication 3) Jonathan Lawrence,Li Li,2001 The techniques available to engineers for the modification of a material s wettability characteristics are invariably extremely complex and difficult to control The use of lasers however has been shown to provide a clean accurate and versatile way of modifying and improving the wettability characteristics of a wide range of engineering materials Lawrence and Li have amply demonstrated the practicability of employing different types of lasers to effect changes in the wettability charactersitics of a number of engineering materials Laser Maodification of the Wettability Characteristics of

Engineering Materials makes extensive and comparative studies of the behavior and properties of composite ceramic metallic and polymeric materials The final chapter practical applications of the use of lasers in modifying material behavior is particularly useful as it puts this cutting edge research in industrial context The authors have extended the scope of their industrially based research to present a very useful coherent source for engineers This excellen volume will be of great value to all those engineers and materials technologists working in industry or research institutions interested in the latest developments of property manipulation Tribologists surface technologists those concerned with protective coatings and bonding materials as well as anyone interested in laser technology opt electronics marking and laser engraving will find Laser Modification a useful guide

Machining of Natural Stone Materials Xipeng Xu,2003 Stone dressing continues to expand steadily in nearly all of those countries having an abundant supply of suitable raw material due to the increasing demand for stone products Because competition from emerging stone processing countries has been putting traditional stone supplying countries under economic pressure various attempts are being made to improve the financial viability of stone processing operations and thereby maintain natural stone s position as a cost effective building material Numerous papers related to the machining of natural stone have been published in diverse journals and conference proceedings but an overall treatment of the subject for the general reader is difficult to find The purpose of this book is to provide an opportunity for academic researchers and industrial experts to summarize the achievements made and to predict new trends in this area all in a single volume
