Surface Properties and Catalysis by Non-Metals J. P. Bonnelle, B. Delmon, E. G. Derouane, 2014-01-15 *Surface Properties and Catalysis by Non-Metals* J. P. Bonnelle, B. Delmon, E. G. Derouane, 2012-12-06 In the field of heterogeneous catalysis it is convenient to distinguish in a perfectly unjustified and over simplified way between metal catalysts and the other catalysts The first are easy to define they are those in which a reduced metal is the active phase It is thus easy to circumscribe by exclusion the other class namely the non metals We have adopted this definition for the sake of our colleagues working on catalysis by metals and to avoid a lengthy title like surface properties and catalysts by transition metal oxides sulfides carbides nitriles etc Defined in this manner non metal catalysts represented in 1980 84 wt % of the industrial heterogeneous catalysts To be more specific this proportion corresponds to catalysts which under the working conditions in the industrial plant contain their catalytically active metallic elements in a non reduced state It should however be recalled that most metal catalysts are supported on oxides which often represent over 90% sometimes 99.4% in the case of the platinum reforming catalysts of the total weight

Structure and Reactivity of Surfaces C. Morterra, A. Zecchina, G. Costa, 1989-07-01 Between the area known as surface science which mainly deals with single crystal surfaces and the vast area of the surface properties of dispersed solids knowledge of which is widely applied in catalysis and materials science there is still a remarkably wide although gradually decreasing gap Because fundamental physico chemical problems are involved this borderline area needs to be explored With this objective the Trieste meeting brought together specialists with a variety of origins and backgrounds with the aim of stimulating the growth of our knowledge in this area This proceedings volume contains ninety three papers comprising plenary lectures short communications and poster contributions on the applications of physical and theoretical methods to perfect and dispersed microcrystalline and amorphous metals oxides and mixed systems Special emphasis is given to metal support interfaces The book thus provides a wealth of up to date information on a topic of current interest which will be of value to researchers who use chemical and or physical methods for the study of surfaces

Design of Heterogeneous Catalysts Umit S. Ozkan, 2009-02-11 This long awaited reference source is the first book to focus on this important and hot topic As such it provides examples from a wide array of fields where catalyst design has been based on new insights and understanding presenting such modern and important topics as self assembly nature inspired catalysis nano scale architecture of surfaces and theoretical methods With its inclusion of all the useful and powerful tools for the rational design of catalysts this is a true must have book for every researcher in the field

Metal Oxide Catalysis, 2 Volume Set S. David Jackson, Justin S. J. Hargreaves, 2008-11-24 With its two volume structure this handbook and ready reference allows for comprehensive coverage of both characterization and applications while uniform

editing throughout ensures that the structure remains consistent The result is an up to date review of metal oxides in catalysis The first volume covers a range of techniques that are used to characterize oxides with each chapter written by an expert in the field Volume 2 goes on to cover the use of metal oxides in catalytic reactions For all chemists and engineers working in the field of heterogeneous catalysis *Characterization of Solid Materials and Heterogeneous Catalysts, 2 Volume Set* Michel Che,Jacques C. Vedrine,2012-05-14 This two volume book provides an overview of physical techniques used to characterize the structure of solid materials on the one hand and to investigate the reactivity of their surface on the other Therefore this book is a must have for anyone working in fields related to surface reactivity Among the latter and because of its most important industrial impact catalysis has been used as the directing thread of the book After the preface and a general introduction to physical techniques by M Che and J C Vedrine two overviews on physical techniques are presented by G Ertl and Sir J M Thomas for investigating model catalysts and porous catalysts respectively The book is organized into four parts Molecular Local Spectroscopies Macroscopic Techniques Characterization of the Fluid Phase Gas and or Liquid and Advanced Characterization Each chapter focuses upon the following important themes overview of the technique most important parameters to interpret the experimental data practical details applications of the technique particularly during chemical processes with its advantages and disadvantages conclusions Soft Chemistry Leading to Novel Materials Rajendra P. Agarwala,2001 Recent advances in solid state chemistry have resulted in substantial progress towards achieving a better understanding of the solid state and have even led to the development of new predictive capabilities in crystal chemistry Entirely new ways of studying and preparing advanced materials have been the result of pursuing the so called soft chemistry approach to materials science **The Effect of Carbon and Oxygen on the Surface Chemistry of Tungsten Carbides** Fabio Henrique Lobo Alvim Ribeiro,1989
