Surgery Of The Hallux An Issue Of Foot And Ankle Clinic:

Hallux Rigidus, An issue of Foot and Ankle Clinics of North America Eric Giza, 2015-09-10 In the MTP joint as in any joint the ends of the bones are covered by a smooth articular cartilage. If wear and tear or injury damage the articular cartilage the raw bone ends can rub together. A bone spur or overgrowth may develop on the top of the bone. This overgrowth can prevent the toe from bending as much as it needs to when you walk. The result is a stiff big toe or hallux rigidus. Hallux rigidus usually develops in adults between the ages of 30 and 60 years. No one knows why it appears in some people and not others. It may result from an injury to the toe that damages the articular cartilage or from differences in foot anatomy that increase stress on the joint. Managing Complications of Foot and Ankle Surgery, An Issue of Foot and Ankle Clinics of North America J.
