, Theoretical Foundations of Behavior Therapy Hans J. Eysenck, Irene Martin, 2013-11-11 In this book we have attempted to confront a number of issues that are intimately related to the theoretical basis of behavior therapy We believe that behavior therapy is an extremely efficient procedure for the treatment of neurotic disorders that it is based on certain principles derived from learning theory and that it is unique in using basic scientific principles in psychology in the service of applied and practical ends We believe that we are here dealing with much more than the advantageous use of serendipitous borrowings from nonexistent principles the cookbook collection of precepts methods and working rules that happen to have lasting effects We also believe that there is truly a general principle underlying behavior therapy rather than a varied mass of nonintegrated therapies that have little in common other than a name These beliefs are often contested but usually those who oppose them do so on the basis of misconceptions and misunderstandings that indicate a lack of knowledge of fundamental facts It is the purpose of this book to remove these misconceptions and misunderstandings and to bring up to date our knowledge in certain fundamental areas of learning theory behavior therapy and the biological foundations of personality and individual differences There are three major groups of misconceptions and misunderstandings The first of these relates to beliefs held by many psychiatrists and cognitive psychologists relating to behavior therapy

The Mathematical Theory of Information Jan Kåhre, 2012-12-06 The general concept of information is here for the first time defined mathematically by adding one single axiom to the probability theory This Mathematical Theory of Information is explored in fourteen chapters 1 Information can be measured in different units in anything from bits to dollars We will here argue that any measure is acceptable if it does not violate the Law of Diminishing Information This law is supported by two independent arguments one derived from the Bar Hillel ideal receiver the other is based on Shannon's noisy channel The entropy in the classical information theory is one of the measures conforming to the Law of Diminishing Information but it has however properties such as being symmetric which makes it unsuitable for some applications The measure reliability is found to be a universal information measure 2 For discrete and finite signals the Law of Diminishing Information is defined mathematically using probability theory and matrix algebra 3 The Law of Diminishing Information is used as an axiom to derive essential

properties of information Byron's law there is more information in a lie than in gibberish Preservation no information is lost in a reversible channel Etc The Mathematical Theory of Information supports colligation i.e. the property to bind facts together making two plus two greater than four Colligation is a must when the information carries knowledge or is a base for decisions In such cases reliability is always a useful information measure Entropy does not allow colligation **Surprise**
