The Poetic Structure Of The World Copernicus And Kepler:

The Poetic Structure of the World Fernand Halpin, 1990 *The Poetic Structure of the World* is a major reconsideration of a crucial turning point in Western thought and culture the heliocentric revolution of Copernicus and Kepler Conceiving of their work not in terms of a history of science or astronomy but as events embedded in a wider field of images symbols texts and practices Fernand Halpin insists that these new representations of the universe cannot be explained by recourse to theories of genius and intuition The scientific imagination is not fundamentally different from a mythic or poetic imagination and the work of Copernicus and Kepler Halpin contends must be examined on the level of rhetorical structure Thus the new sun centered universe is shown to be inseparable from the aesthetic epistemological theological and social imperatives of both Neoplatonism and Mannerism in the sixteenth century

Giordano Bruno and the Geometry of Language Arielle Saiber, 2017-03-02 *Giordano Bruno and the Geometry of Language* brings to the fore a sixteenth century philosopher's role in early modern Europe as a bridge between science and literature or more specifically between the spatial paradigm of geometry and that of language Arielle Saiber examines how to invite what Bruno believed to be an infinite universe its qualities and vicissitudes into the world of language Bruno forged a system of figurative vocabularies number form space and word This verbal and symbolic system in which geometric figures are seen to underlie rhetorical figures is what Saiber calls geometric rhetoric Through analysis of Bruno's writings Saiber shows how Bruno's writing necessitates a crafting of space and is in essence a lexicon of spatial concepts This study constitutes an original contribution both to scholarship on Bruno and to the fields of early modern scientific and literary studies It also addresses the broader question of what role geometry has in the formation of any language and literature of any place and time

Encyclopedia of Cosmology (Routledge Revivals) Norriss S. Hetherington, 2014-04-08 *The Encyclopedia of Cosmology* first published in 1993 recounts the history philosophical assumptions methodological ambiguities and human struggles that have influenced the various responses to the basic questions of cosmology through the ages as well as referencing important scientific theories Just as the recognition of social conventions in other cultures can lead to a more productive perspective on our own behaviour so too a study of the cosmologies of other times and places can enable us recognise elements of our own cosmology that might otherwise pass as inevitable developments Apart from modern natural science therefore this volume incorporates brief treatments of Native American Cave Dweller Chinese Egyptian Islamic Megalithic Mesopotamian Greek Medieval and Copernican cosmology leading to an appreciation of cosmology as an intellectual creation not merely a collection of facts It is a valuable reference tool for any student or academic with an interest in the history of science and cosmology specifically

Kepler's Cosmological Synthesis Patrick J. Boner, 2013-06-17 *The cosmology of Johannes Kepler* remains a mystery On the one hand Kepler's speculations on spiritual faculties are seen as the remnants of Renaissance philosophy On the other his comparison of the cosmos to a clock summons the mechanical metaphor that shaped modern science This book explores the inseparable

connections between Kepler's vitalistic views and his more enduring accomplishments in astronomy. The key argument is that Kepler's celestial biology served as a bridge between his revolutionary astronomy and other less scientific interests, particularly astrology. Kepler's Cosmological Synthesis sheds new light on one of the foundational figures of the Scientific Revolution. By uncovering a new form of coherence in Kepler's world picture, it traces the unlikely intersections of mechanism and vitalism that transformed the fabric of the heavens.

Cosmology Norriss S. Hetherington, 2023-05-31 This book is a collection of contributions examining cosmology from multiple perspectives. It presents articles on traditional Native American and Chinese cosmologies and traces the historical roots of western cosmology from Mesopotamia and pre-Socratic Greece to medieval cosmology.

Science in the Forest, Science in the Past Willard McCarty, Geoffrey E. R. Lloyd, Aparecida Vilaca, 2022-03-29 Science in the Forest Science in the Past Further Interdisciplinary Explorations comprises of papers from the second of two workshops involving a group of scholars united in the conviction that the great diversity of knowledge claims and practices for which we have evidence must be taken seriously in their own terms rather than by the yardstick of Western modernity. Bringing to bear social anthropology, history and philosophy of science, computer science, classics and sinology among other fields, they argue that the use of such dismissive labels as magic, superstition and the irrational masks rather than solves the problem and reject counsels of despair which assume or argue that radically alien beliefs are strictly unintelligible to outsiders and can be understood only from within the system in question. At the same time, they accept that how to proceed to a better understanding of the data in question poses a formidable challenge. Key problems identified in the inaugural workshop whose proceedings were published in HAU Journal of Ethnographic Theory 2019 and in HAU Books 2020 provided the basis for asking how obvious pitfalls might be avoided and a new or revised framework within which to pursue these problems proposed. The chapters in this book were originally published in Interdisciplinary Science Reviews.

Infinity and Perspective Karsten Harries, 2001 A philosophical exploration of the origin and limits of the modern world.

The Astronomer and the Witch Ulinka Rublack, 2015-10-22 Johannes Kepler 1571-1630 was one of the most admired astronomers who ever lived and a key figure in the scientific revolution. A defender of Copernicus's sun-centred universe, he famously discovered that planets move in ellipses and defined the three laws of planetary motion. Perhaps less well known is that in 1615, when Kepler was at the height of his career, his widowed mother Katharina was accused of witchcraft. The proceedings led to a criminal trial that lasted six years, with Kepler conducting his mother's defence. In *The Astronomer and the Witch*, Ulinka Rublack pieces together the tale of this extraordinary episode in Kepler's life, one which takes us to the heart of his changing world. First and foremost, an intense family drama, the story brings to life the world of a small Lutheran community in the centre of Europe at a time of deep religious and political turmoil, a century after the Reformation and on the threshold of the Thirty Years War. Kepler's defence of his mother also offers us a fascinating glimpse into the great astronomer's world view on the cusp between Reformation and scientific revolution. While advancing rational explanations for

the phenomena which his mother's accusers attributed to witchcraft Kepler nevertheless did not call into question the existence of magic and witches On the contrary he clearly believed in them And as the story unfolds it appears that there were moments when even Katharina's children struggled to understand what their mother had done

Modern Religious Architecture in Germany, Ireland and Beyond Lisa Godson, Kathleen James-Chakraborty, 2019-03-07 Modernity and religion are not mutually exclusive Setting German and Irish church synagogue and mosque architecture side by side over the last century highlights the place for the celebration of the new within faiths whose appeal lies in part in the stability of belief they offer across time Inspired by radically modern German churches of the 1920s and 1930s this volume offers new insights into designers of all three types of sacred buildings working at home and abroad It offers new scholarship on the unknown phenomenon of mid century ecclesiastical architecture in sub Saharan Africa by Irish designers a critical appraisal of the overlooked Frank Lloyd Wright trained Andrew Devane and an analysis of accommodating difficult pasts and challenging futures with contemporary synagogue and mosque architecture in Germany With a focus on influence and processes alongside conservationists and historians it features critical insights by the designers of some of the most celebrated contemporary sacred buildings including Niall McLaughlin who writes on his multiple award winning Bishop Edward King Chapel and Amandus Sattler architect of the innovative Herz Jesu Kirche Munich

Comparative Environmental Economic Assessment R. J. G. M. Florax, Peter Nijkamp, Kenneth George Willis, 2002 Over the last decade economists have increasingly recognized the role of meta analysis and value transfer in synthesizing knowledge and efficiently exploiting the existing pool of knowledge Comparative Environmental Economic Assessment explores the potential significance of using these techniques particularly in environmental economics Both meta analysis and value transfer constitute major research tools which efficiently use knowledge previously acquired from other studies The book focuses on the potential role and usefulness of these tools in environmental economic research and goes on to address their validity relevance and applicability A future agenda for research is also illustrated
