- What is superfluidity?
  - Superfluidity is the phenomenon wherein a substance undergoes a state change that completely removes viscosity – the matter flows infinitely and without friction. The lack of friction is directly related to the infinite mobility of a superfluid – friction creates heat, and even slight heat (say from light) can cause a superfluid to return to a normal fluid state. The lack of friction allows the perpetual motion of the superfluid to exist and serves as a “loophole” in thermodynamics.
