Workflow Management Systems and Interoperability Asuman Dogac, Leonid Kalinichenko, Tamer Özsu, Amit Sheth, 2012-12-06 Workflow management systems (WFMS) are enjoying increasing popularity due to their ability to coordinate and streamline complex organizational processes within organizations of all sizes. Organizational processes are descriptions of an organization's activities engineered to fulfill its mission, such as completing a business contract or satisfying a specific customer request. Gaining control of these processes allows an organization to reengineer and improve each process or adapt them to changing requirements. The goal of WFMSs is to manage these organizational processes and coordinate their execution.

was demonstrated in the first half of the high degree of interest in WFMSs of the 1990s by a significant increase in the number of commercial products, once estimated to be about 250 and the estimated market size in combined 2 billion in 1996. Ensuing maturity, product sales, and services of about 1 billion are demonstrated by consolidations during the last year. Ranging from mere e-mail based calendar tools and flow charting tools to very sophisticated integrated development environments for distributed enterprise-wide applications and systems to support programming in the large, these products are finding an eager market and opening up important research and development opportunities. In spite of their early success in the marketplace, however, the current generation of systems can benefit from further research and development, especially for increasingly complex and mission-critical applications.

Organizational Learning and Technological Change Cristina Zuccheromaglio, Sebastiano Bagnara, Susan U. Stucky, 2012-12-06 What the Book Is About This book is about the problem of organizational learning, that is, the analysis of organizations conceived as learning systems. In order to survive in a period of rapid change, organizations must innovate and learn to develop and exploit their abilities to learn. The most innovative organizations are those that can respond with great efficiency to internal and external changes. They respond to and generate technological change by acting as effective

learning systems They maximize the learning potential of ongoing and normal work activities The organizational structure and the technology allow members to learn while the organizations itself learns from its members So organizations reach high levels of innovation when structured to take advantage of the social distributed participative situated processes of learning developed by its members in interaction with the technological environment Organizations should consider learning as an explicit productive objective They must create integrated learning mechanisms that encompass technological tools reward and incentive systems human resource practices belief systems access to information communication and mobility patterns performance appraisal systems organizational practices and structures The design of efficient learning organizations requires cognitive technological and social analyses All the computer based technologies e g office automation communication and group decision support not only those devoted to and used in training activities have to be considered as tools for organizational learning and innovation

Stamper, 2012-12-06 Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies It shares common interests with many other approaches to information and organisations such as computer science computational semiotics organisational engineering and language action perspective The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines The analysis and design of information systems develops methods for solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organisational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organisational and technical systems This perspective is outlined in the chapter presentations of *Information Organisation and Technology*
