Surfactant Solutions New Methods Of Investigation Surfactant Science Series Volume 22:

Sugar-Based Surfactants Cristóbal Carnero Ruiz, 2008-12-09 Touted as the new darling of the chemical industry alkyl polyglycosides are gaining in popularity due to the fact that they are readily biodegradable low toxic and made from renewable resources Sugar Based Surfactants compiles the most recent and relevant aspects of sugar based surfactants including self association phase behavior and interfacial properties Focusing on both colloidal and interfacial science the book deals with the adsorption of surfactants in both the air liquid and solid liquid interfaces It also covers new advances in surfactant science such as the development of a family of potent surface active agents that are non toxic and thus usable in ubiquitous consumer products *Modern Characterization Methods of Surfactant Systems* Bernard Binks, D. Furlong, 1999-04-16 Describes recent techniques applied to characterize surfactant systems such as surfactant stabilized colloids micelles microemulsions emulsions and foams in both aqueous and nonaqueous fluids The text probes adsorption and wetting phenomena at interfaces including solid liquid liquid vapour and liquid liquid It provides helpful examples and case studies illustrating how these techniques may be used in complementary ways **Surfactants in Solution** K.L. Mittal, D.O. Shah, 2013-03-08 This volume chronicles the proceedings of the 8th International Symposium on Surfactants in Solution SIS held in Gainesville FL June 10 15 1990 This series of symposia have been smoothly running since 1976 but the appellation Surfactants in Solution was used for the first time in 1982 in Lund Since then our logo SIS has become very familiar to everyone involved in surfactants In Lund the meeting was billed as the Fourth International Symposium on Surfactants in Solution Earlier three events were held under different rubrics but proceedings of all these symposia except the 7th SIS held in Ottawa in 1988 have been properly documented As a matter of fact so far 10 volumes have appeared under the title Surfactants in Solution 1 2 3 The program for the 9th SIS was very comprehensive and many ramifications of surfactants were covered and it was a veritable international event It contained a total of 384 papers by 869 authors from practically every corner of our planet Just the sheer number of papers is a testimonial to the high tempo of research and tremendous interest in this wonderful class of materials As in the past there were plenary lectures 5 invited talks 37 oral presentations 195 and poster presentations 147 The plenary lectures were given by Prof J Th G Overbeek Prof C A Bunton Prof H Ti Tien and Dr J Swalen The lecture by Prof Overbeek the doyen of surface and colloid science was a real treat *Surfactants and Polymers in Drug Delivery* Martin Malmsten, 2002-07-22 This reference features the latest findings surrounding the physicochemical aspects of surfactant and polymer systems to facilitate the design and understanding of novel and advanced drug delivery formulations It covers the basics of surfactant and polymer surface activity and self assembly the various types of structures formed by such compounds Physico-Chemical Properties of Selected Anionic, Cationic and Nonionic Surfactants N.M. van Os, J.R. Haak, L.A.M. Rupert, 2012-12-02 The number of physico chemical investigations of surfactants in solution whether aqueous or nonaqueous has dramatically increased in recent years However literature reports on

surfactants in solutions are scattered over a plethora of scientific journals and books which differ widely in scope and readership. Such data are often difficult to retrieve because there have been no systematic compilations with the exception of those for CMCs and for micelle aggregation numbers. The present compilation meets that need by covering as completely as possible the physico-chemical properties of selected series of homologous surfactants. These surfactants are in most cases isomerically pure, are well known and have been used in numerous academic and industrial studies. The properties include aggregation number, cloud point, CMC, ^{13}C NMR correlation length, counterion binding, density, enthalpy of micelle formation, entropy of micelle formation, Gibbs free energy of micelle formation, head group area, ^1H NMR hydration number, Krafft temperature, melting point, micelle radius, microscopic viscosity, miscibility curve, partial molar volume, phase inversion temperature, refractive index, self-diffusion coefficient, surface tension and upper critical temperature. The book also contains two and three component phase diagrams of many nonionic surfactants. The solvent is water in most cases; however, some data refer to properties in D_2O , electrolyte solutions and nonaqueous solvents. The variables are temperature and concentration. Where possible, the method of measurement is given. Data on the purity of the compounds and the accuracy of the measurement methods are not included as these can easily be found in the original sources which mostly date from the period 1970–1991 and are given at the end of each chapter. The Index section contains a compound index, a property index, a symbol index and a cross index which facilitate easy access to the data. This valuable collection of data will be of great use to anyone involved in Colloid and Surface Science academics as well as industrial workers and will stimulate further work.

Ionomers Shulamith Schlick, 1996-01-15. The molecular structure and composition of ionomers lead to a complex superposition of properties of organic chains and of polyelectrolytes. The potential use of this class of polymers in applications such as surfactants, ion-selective membranes in electrochemical processes, coatings, fuel cells and batteries has sparked a vast amount of research.

Polymer Solutions, Blends, and Interfaces I. Noda, D.N. Rubingh, 2012-12-02. The behaviour of polymers in multi-component and multiphase systems such as solutions, blends and interfaces derived from both natural and synthetic sources and the subsequent influence of this on their physical properties is the theme of this book. Important new material on multiphase polymer systems such as block copolymers and liquid crystalline polymers is provided and the solution and surface properties of enzymes and surface-active polymers is described both theoretically and experimentally. The application of theory to the development of new cellulosic materials is particularly noteworthy. The relationship between end-use properties such as adhesion, wetting and colloidal stability and molecular structure at the interface is addressed. Examples include the capillary pressure of nylon microporous membranes, a new technique for characterizing the adhesion between incompatible polymers and the influence of the glass transition temperature at the fiber matrix interface on interfacial shear.

strength Characterization of polymer films both electrochemically and via optical techniques is covered and the interactions of amphiphilic ions with polyacrylate polymer are described The final two chapters introduce the topic of enzyme mobility at an interface and show how this may affect their role as biological catalysts **Surfactants in Solution** Arun K.

Chattopadhyay, K.L. Mittal, 2020-08-26 Contains selected invited papers presented at the 10th International Symposium on Surfactants in Solution held in Caracas Venezuela The volume covers phase behaviour of monolayers contact angle hysteresis micellar relaxation micellar catalyzed reactions polymerization in microemulsions polymer surfactant complexation asphaltenes and more *Nanoscience* Victor M. Starov, 2010-06-15 Bringing together a prominent roster of 42 leading investigators and their teams this volume details the wide range of theoretical and experimental knowledge that can be successfully applied for investigating nanosystems The book provides researchers with a full examination of nano disperse colloids homogeneous and heterogeneous nano structured materials and their properties and shelf organization at the nano scale It explores non linear electrokinetic phenomena in nano sized dispersions and nano sized biological systems It discusses application aspects of technological processes in great detail offering scientists and engineers across all fields authoritative commentary on colloid and interface science operating at the nanoscale
