Minding the Heavens Leila Belkora,2021-05-13 Today we recognize that we live on a planet circling the sun that our sun is just one of billions of stars in the galaxy we call the Milky Way and that our galaxy is but one of billions born out of the Big Bang Yet as recently as the early twentieth century the general public and even astronomers had vague and confused notions about what lay beyond the visible stars Can we see to the edge of the universe Do we live in a system that would look from a distance like a spiral nebula This fully updated second edition of *Minding the Heavens The Story of Our Discovery of the Milky Way* explores how we learned that we live in a galaxy in a universe composed of galaxies and unseen mysterious dark matter The story unfolds through short biographies of seven astronomers Thomas Wright William Herschel and Wilhelm Struve of the 18th and 19th centuries the transitional figure of William Huggins and Jacobus Kapteyn Harlow Shapley and Edwin Hubble of the modern big telescope era Each contributed key insights to our present understanding of where we live in the cosmos and each was directly inspired by the work of his predecessors to decipher the construction of the heavens Along the way the narrative weaves in the contributions of those in supportive roles including Caroline Herschel William's sister and the first woman paid to do astronomy and Martha Shapley a mathematician in her own right who carried out calculations for her spouse Through this historical perspective readers will gain a new appreciation of our magnificent Milky Way galaxy and of the beauties of the night sky from ghostly nebulae to sparkling star clusters Features Fully updated throughout to reflect the latest in our understanding of the Milky Way from our central supermassive black hole to the prospect of future mergers with other galaxies in our Local Group Explains the significance of current research including from the Gaia mission mapping our galaxy in unprecedented detail Unique and broadly appealing approach A biographical framework and ample illustrations lead the reader by easy enjoyable steps to a well rounded understanding of the history of astronomy Praise for the first edition A terrific blend of the science and the history Marth Haynes Goldwin Smith Professor of Astronomy Cornell University The book is a treat Highly recommended for public and academic libraries Peter Hepburn now Head Librarian College of the Canyons Santa Clarita California **The Observer's Guide to Astronomy** Patrick
