The Pineal 1977:

The Pineal Gland and its Endocrine Role J. Axelrod, 2013-12-01 The pineal gland has been a subject of interest and speculation for more than 2000 years Greek anatomists were impressed by the observation that the pineal gland is an unpaired structure and they believed that it regulated the flow of thoughts The philosopher Descartes proposed an important role for this organ in brain function At the beginning of the 20th century experiments by several investigators indicated that the pineal influenced sexual function and skin pigmentation and was also responsive to light signals With the isolation of melatonin from bovine pineal glands by Lerner and coworkers in 1958 the modern era of pineal research was initiated Within a few years the pathway for the biosynthesis of melatonin in the pineal was elucidated Soon thereafter it was shown that the formation of melatonin was influenced by environmental lighting Anatomists found that the pineal was innervated by sympathetic nerves and that the gland had photoreceptor elements It was also shown that the gonads were influenced by light via the pineal gland Research on the pineal gland became of increasing interest to anatomists biochemists pharmacologists and endocrinologists With the expanding knowledge concerning the function of the pineal gland contributed by the wide variety of disciplines it was thought that a study workshop would be timely **The Pineal**, 1978

The Pineal Gland and Cancer C. Bartsch, H. Bartsch, D.E. Blasko, D.P. Cardinali, W.J.M. Hrushesky, Dieter Mecke, 2012-12-06 The link between the pineal gland and cancer is a rapidly emerging research field due to promising experimental and clinical trials with melatonin The pineal gland acts as a transducer of environmental light to regulate rhythmic processes including reproductive function in seasonally breeding animals and the entrainment of circadian rhythms such as the sleep wake cycle in man This book elucidates the physiological significance of the pineal gland and surveys phenomena and mechanisms of pineal tumor interaction at the neuroendocrine neuroimmune neural and molecular levels Yet unidentified low molecular weight pineal substances with tumor inhibiting capacity a possible involvement of melatonin in electromagnetic field effects on cancer and the oncotherapeutic potential of melatonin are also addressed The encouraging results should incite further research to elucidate the exact nature of the link between the pineal gland and cancer for the benefit of patients **The Pineal Gland of Vertebrates Including Man**, 2011-09-22 **The Pineal Gland of Vertebrates Including Man** *Neuroendocrine Mediation of Photoperiod and Other Environmental Influences on Physiological Responses in Salmonids* Hugh A. Poston, 1978 Manipulation of photoperiods combined with modifications by other environmental conditions such as temperature and salinity can alter growth smoltification and sexual maturation of salmonid fishes by way of a neuroendocrine pathway The extent of responses of salmonids to environmental changes however is restricted by circadian endogenous metabolic rhythms that cannot be completely overcome by external factors The success of the manipulation of photoperiod depends primarily on four factors the daily length and the duration of the light treatment the season and time of day during which fish are exposed to light the age sex size and species of fish and the type of

physiological response under consideration Although gaps remain in the available information salmonids apparently need systematically changing intermittent periods of darkness for optimum long term stimulation of growth reproduction and migration

The Pineal Gland Russel J. Reiter, 2020-03-25 First published in 1981 This volume talks about new research understandings of the function of the Pineal Gland which was thought to have no legitimate function

Clinical Neuroendocrinology G. M. Besser, Luciano Martini, 2013-10-22 Clinical Neuroendocrinology Volume II discusses neuroendocrine science and its application to the analysis of human physiology and behavior This book stresses the importance of the interrelationships between central and peripheral signals neurotransmitters and neuromodulators and target glands and peripheral tissues to ensure coordination of somatic and behavioral development and function The centralist concepts of the importance of brain hormones are revised in this text emphasizing that neurohumoral factors isolated from brain tissues and initially considered to be primarily involved in the central nervous system regulation of the endocrine system also exist outside the brain and spinal cord This volume is valuable to neuroendocrinologists but is also a good source for those involved in basic and clinical research and patient management

The Pineal - 1977 Russel J. Reiter, 1977

Progress in Psychobiology and Physiological Psychology James M. Sprague, Alan N. Epstein, 2013-10-22 Progress in Psychobiology and Physiological Psychology Volume 9 reviews developments in the fields of psychobiology and physiological psychology with emphasis on selected areas of research relating brain mechanisms and behavior Topics covered range from sensory perceptual systems in mammals to behavioral modulation of visual responses in monkeys Brain pathways for vocal learning in birds are also examined along with neural mechanisms in taste aversion learning Comprised of seven chapters this volume begins with an insightful account of the evolution of concepts regarding cortical organization relevant to perception in mammals Studies of single unit activity in awake behaving monkeys are then presented followed by a discussion on the neural control of song in birds In particular the brain pathways involved in vocal learning in birds are defined anatomically and physiologically including the presence of hemispheric dominance and the sensitivity to steroid hormones Subsequent chapters focus on the response characteristics of the cells in the forebrain that give stimuli their significance for associative learning the neuropsychological mechanisms of taste aversion learning and the psychobiology of thirst The final chapter is devoted to the pineal gland and its anatomical connection to the eyes together with pineal hormones polypeptides and proteins This book should appeal to biologists psychologists and physiologists
