Slow Sculpture Theodore Sturgeon, 2009-10-20 Theodore Sturgeon was a model for his friend Kurt Vonnegut's legendary character Kilgore Trout and his work was an acknowledged influence on important younger writers from Harlan Ellison and Robert Silverberg to Stephen King and Octavia Butler. His work has long been deeply appreciated for its sardonic sensibility, dazzling wordplay, conceptual brilliance, memorable characters, and unsparing treatment of social issues such as sex war and marginalized members of society. Sturgeon also authored several episodes of the original Star Trek TV series and originated the Vulcan phrase "Live long and prosper." This twelfth volume of North Atlantic's ambitious series reprinting his complete short stories includes classic works such as the award-winning title story, which won both the Hugo and Nebula Awards in 1971, as well as "Case and the Dreamer," a well-crafted tale of an encounter with a trans-spatial being that is also a meditation on love, and "The Widget," the "Widget and Boff," a creative exploration of the human ability to achieve self-realization in response to crisis. The book includes a new Foreword, an illuminating section of Story Notes, and a comprehensive index for the entire series.

**Galaxy Science Fiction**, 1975      **The History of the Science-fiction Magazine** Michael Ashley, 2000 This third volume in Mike Ashley's four-volume study of the science fiction magazines focuses on the turbulent years of the 1970s when the United States emerged from the Vietnam War into an economic crisis. It saw the end of the Apollo moon programme and the start of the ecology movement. This proved to be one of the most complicated periods for the science fiction magazines. Not only were they struggling to survive within the economic climate, they also had to cope with the death of the father of modern science fiction, John W. Campbell Jr., while facing new and potentially threatening opposition. The market for science fiction diversified as never before with the growth in new anthologies, the emergence of semi-professional magazines, the explosion of science fiction in college, the start of role-playing gaming magazines, underground and adult comics, and with the success of Star Wars media magazines. This volume explores how the traditional science fiction magazines coped with this from the death of Campbell to the start of the major popular science magazine Omni and the first dreams of the Internet.

is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings Science Fact and Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and

technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed

**Fiction** David Seed,2023-07-18 This volume presents a selection from the American and British fiction of the nineteenth century which was evolving into what we now know as science fiction Taking Frankenstein as its formative work it assembles stories and excerpts from narratives exploring the complex impact of new technologies like the telegraph and later the cinema or new scientific practices like mesmerism hypnotism and microscopy The selected authors range from those famous within the realist tradition like George Eliot and Mark Twain to scientists like the physician Silas Weir Mitchell and the inventor Thomas Edison They repeatedly destabilize their narratives so that some come to resemble scientific records and frequently leave their endings unresolved encouraging the reader to speculate about their subjects which include extensions to the senses new inventions and challenges to individual autonomy Many focus on experiments but might combine scientific enquiry with the supernatural producing hybrid narratives as a result which are difficult to classify
