**Is the Temperature Rising?** S. George Philander, 2018-06-05 Most of us have heard the dire predictions about global warming Some experts insist that warming has already started and they warn of such impending disasters as the sea level rising to flood coastal cities Others however have issued loud counterclaims assuring us that global warming is a myth based on misleading data How can we tell who is right and how we should respond And why is there no scientific consensus on a matter of such vital importance George Philander addresses these questions in this book as he guides the nonscientific reader through new ideas about the remarkable and intricate factors that determine the world's climate In simple nontechnical language Philander describes how the interplay between familiar yet endlessly fascinating phenomena winds and clouds light and air land and sea maintains climates that permit a glorious diversity of fauna and flora to flourish on Earth That interplay also creates such potent weather disrupters as El Niño and La Niña translates modest fluctuations in sunlight into global climate changes as dramatic as the Ice Age and determines the Earth's response to the gases we are discharging into the atmosphere such as those that led to the ozone hole over Antarctica and those that are likely to cause global warming In his discussion of these matters Philander emphasizes that our planet is so complex that the scientific results will always have uncertainties To continue to defer action on environmental problems on the grounds that more accurate scientific results will soon be available could lead to a crisis To make wise decisions it will help if the public is familiar with the geosciences which explore the processes that make ours a habitable planet The book is an excellent introduction to the basics of the Earth's climate and weather and will be an important contribution to the debate about climate change and the relationship between scientific knowledge and public affairs Temperature Rise Within Radioactive Liquid Wastes Injected Into Deep Formations Herbert E.
