Oceanography and Surface Layer Meteorology in the B/C Scale Gerold Siedler, 2013-10-02 Oceanography and Surface Layer in Meteorology in the B C Scale is a collection of papers that deals with the oceanic and atmospheric boundary layers in the region in or close to the Intertropical Convergence Zone ITCZ in the Eastern Atlantic Papers discuss global atmospheric circulation to improve weather prediction and climate modeling in line with the objectives of the Global Atmospheric Research Programme GARP In particular the GARP Atlantic Tropical Experiment GATE addresses the means of estimating the effects of smaller tropical weather systems on synoptic scale circulations GATE also facilitates the

development of numerical modeling and prediction methods One paper compares a mathematical representation of the transport of energy by convective clouds and the cloud free environment with a relationship based on the physical structure of the cloud and environment Another paper analyzes model simulations made for various upwelling velocities rainfall events wind stress events diurnal heating cycles and internal tidal forcing using the GATE dominant scales of tropical weather systems The model simulations show that in the GATE C Scale demarcation area no single process dominates The collection will be appreciated by meteorologists environmentalists merchant marines students studying hydrology and by people working in the general earth sciences Encyclopedia of Atmospheric Sciences Gerald R. North, John A. Pyle, Fuqing Zhang, 2014-09-14 Encyclopedia of Atmospheric Sciences Second Edition Six Volume Set is an authoritative resource covering all aspects of atmospheric sciences including both theory and applications With more than 320 articles and 1 600 figures and photographs this revised version of the award winning first edition offers comprehensive coverage of this important field The six volumes in this set contain broad ranging articles on topics such as atmospheric chemistry biogeochemical cycles boundary layers clouds general circulation global change mesoscale meteorology ozone radar satellite remote sensing and weather prediction The Encyclopedia is an ideal resource for academia government and industry in the fields of atmospheric ocean and environmental sciences It is written at a level that allows undergraduate students to understand the material while providing active researchers with the latest information in the field Covers all aspects of atmospheric sciences including both theory and applications Presents more than 320 articles and more than 1 600 figures and photographs Broad ranging articles include topics such as atmospheric chemistry biogeochemical cycles boundary layers clouds general circulation global change mesoscale meteorology ozone radar satellite remote sensing and weather prediction An ideal resource for academia government and industry in the fields of atmospheric ocean and environmental sciences

Hydrodynamics of the Equatorial Ocean J.C.J. Nihoul, 1983-05-01 Hydrodynamics of the Equatorial Ocean *Ocean Hydrodynamics of the Japan and East China Seas* T. Ichiye, 2000-04-01 The Japan and East China seas are both marginal seas but have different oceanographical features the former is a deep basin filled with polar water but a jet like current in the upper layer and the latter is a wide continental shelf with two large rivers This book provides the first synthesis of information on the circulation hydrography coastal phenomena tides turbidity and wind waves of these seas Circulation caused by wind pressure distributions and other effects is discussed with the aid of analytical numerical and hydraulic models many of which can also be applied to problems in other seas New oceanographic techniques covered include remote sensing drifter tracking and moored current meter system providing information useful to both researchers and students

Geyer, 2011-09-22 Submersibles and Their Use in Oceanography and Ocean Engineering **The Dictionary of Physical Geography** David S. G. Thomas, 2016-02-23 This fully revised comprehensive fourth edition covers the whole field of physical

geography including climate and atmosphere geomorphology biogeography hydrology oceans Quaternary environmental change soils remote sensing and GIS This new edition reflects developments in the discipline during the last decade with the expert advisory group providing an international perspective on the discipline of physical geography Over 2000 entries that are self contained or cross referenced include 200 that are new to this edition over 400 that are rewritten and updated and new supporting references and additional recommended reading in many others Entries removed from the last edition are available in the online resource This volume is the essential reference point for students of physical geography and related environmental disciplines lecturers and interested individuals alike *Hydrodynamics of Coastal Zones* S.R.

Massel,1989-04-01 This book discusses selected theoretical topics of coastal hydrodynamics including basic principles and applications in coastal oceanography and coastal engineering It is not intended as a handbook the emphasis is placed on presentation of a number of basic problems rather than giving detailed instructions for their application The bulk of the material deals with surface waves In the author's opinion there is still a strong need for a book on wave phenomena in the coastal waters as general textbooks on sea surface dynamics focus most of their attention on the deep ocean This book intends to fill this need by concentrating on the phenomena typical of the coastal zone Based on lectures given at the Institute of Hydroengineering Polish Academy of Sciences in Gdansk the approach throughout is a combination of the theoretical and observational A basic knowledge of ordinary and partial differential equations as well as the statistical and spectral analysis of time series is assumed The reader should also be familiar with fundamental hydrodynamic concepts The book comprises nine chapters Governing equations and conservation laws are treated in Chapter 1 using the variational principles The theory of regular surface waves is covered in Chapters 2 to 4 The nonlinear effect of wave train modulation and their breaking of beaches is examined in Chapter 5 Chapters 6 and 7 focus on the statistical and spectral treatment of waves induced by wind Current generation and circulation pattern are the subject of Chapter 8 while sea level variations are examined in Chapter 9 References for further reading are given at the end of each chapter Physical Oceanography of Coastal and Shelf Seas B. Johns,1983-01-01 This book provides a thorough treatment of both theoretical and observational aspects of the interaction between the sea floor and the near sea floor dynamics the effect this has on the distribution of internal and seabed stress and the relevance of the associated dynamics to sedimentation processes The theoretical work described involved both analytical and numerical modelling studies of a wide range of near shore and shelf processes These provide a valuable store of information on the interaction between the sea floor and the dynamics of the overlying water The book also includes an account of tidal analysis techniques and how these are being applied in the analysis of tidal current measurements The observational studies relate to measurements of near sea floor turbulence and sand transport in the littoral zone **Marine Gravity** P. Dehlinger,1978-01-01 Marine Gravity **Fundamentals of Marine Acoustics**

,1977-01-01 Fundamentals of Marine Acoustics *Oceanography of Asian Marginal Seas* K. Takano,1991-06-06 This volume

contains 31 papers on physical and geological oceanography marine engineering and meteorology in the Japan Sea and the East China Sea Almost all these papers were presented at the Fifth JECSS Japan and East China Seas Study Workshop held in Korea in 1989 Results of multinational cooperative studies carried out since the initiation of JECSS in 1981 are presented Authors are from China Japan Korea UK USA and USSR A wide range of subjects are covered from the viewpoint of various disciplines The status of recent research on Asian marginal seas is outlined and points at issue are defined An important aspect is the coverage of results from the USSR and China which are not normally easily accessible to scientists in other countries despite the importance of this research to the international scientific community Various subjects from estuaries to the problems related to the whole north Pacific are covered in this book and it is recommended to scientists in coastal oceanography environmental oceanography mesoscale synoptic scale oceanography and large scale oceanography
