Temperature Regulation

Clark M. Blatteis

Temperature Regulation:

Physiology and Pathophysiology of Temperature Regulation Clark M. Blatteis, 1998 This is a user friendly monograph designed for medical students as well as graduate students and postdoctoral trainees in medicine and other health related sciences who need a comprehensive overview of thermoregulation It presents the bases of the modern concepts in thermal physiology and pathophysiology bringing together the disciplines encompassed by this highly integrative field physiology anatomy biophysics molecular and cellular biology pharmacology neuroscience pathology medicine and others into a clear and concise form that can be read comfortably in a relatively short time This text was conceived by the Commission on Thermal Physiology of the International Union of Physiological Sciences in response to its concern over the inadequate and outdated coverage of this topic in traditional textbooks The membership of this Commission comprises international experts in each of the subfields of thermal physiology with extensive research and teaching experience in their respective specialties They are the authors of the chapters of this indispensable textbook **Temperature Regulation in Laboratory Rodents** Christopher J. Gordon, 1993-08-27 With the help of extensive data tables and figures this book explains the key facets of rodent thermal physiology including neurological control and gender and intraspecies variations The book should therefore find use in government academic or industrial laboratories whose researchers are working with rodents

Thermoreception and Temperature Regulation H.A. Braun, J. Bligh, K. Brück, K. Voigt, G. Heldmaier, 2012-12-06 As indicated in the Preface the contributions to this volume are based upon the papers presented at the symposium on Thermoreceptors and Temperature Regulation held in July 1988 at the Institute of Physiology of the University of Marburg Federal Republic of Germany to celebrate and commemorate the life and achievements of HERBERT HENSEL who directed that Institute from 1955 until his death in 1983 and whose most notable and significant contributions to thermal physiology were in the areas of the properties and characteristics of thermal sensors mammalian thermoregulation more generally and the psychophysiology of thermal sensation All the papers in this volume deal to a greater or lesser extent with these discernibly different but closely allied aspects of mammalian physiology The editors have sought to achieve cohesion flow and balance both in the contributed articles and in their order of presentation without either large gaps or redundancies in the coverage of the recent advances in the understanding of thermoreceptors and thermoregulation At the same time we have sought to avoid such a degree of editorial control as to destroy the individuality of the contributions and the judgements upon which they were based We have also sought to look both backwards and forwards and to include some legitimate extension of the consideration of thermosensitivity and thermoregulation into such areas as climatic adaptation and fever Hence the greater or lesser of the closeness of this series of papers to HERBERT HENSEL'S scientific interests *Thermal Physiology* Clark M. Blatteis, Nigel A. S. Taylor, Duncan Mitchell, 2022-09-22 This edited volume records the critical historical developments in thermal physiology and makes them accessible to new and senior thermal biologists and scientists in related

fields Readers will discover how the discipline developed all over the world Contributions from 14 different countries recollect all prominent discoveries starting in the 18th century Like other volumes of the Perspectives in Physiology series this book reveals the people behind these discoveries The authors also set the scenes in which the research was conducted in their countries From geopolitical frameworks to new technologies and extraordinary personalities this volume shows that scientific progress is influenced by many often unforeseeable factors The history of thermal physiology not only is a story about individual outstanding scientists but a testament for open collaboration and international comradery

Regulation: Digestion, Nutrition, Excretion G. A. Kerkut, 2013-10-22 In this volume seven of the chapters deal with feeding and diet which is reasonable since insects consume an estimated 15-20% of all the world's planted crops Many insects even have a specialized larval feeding stage that usually occupies a different ecological niche to the adult and so does not compete for the adult's food stock Other chapters describe the means by which insects maintain their water balance nitrogen balance and temperature balance under a range of conditions These involve regulation by hormonal and behavioural systems that are also described here The 14 chapters are all extensively illustrated and referenced and therefore provide excellent summaries of current knowledge They will be of great value to entomologists zoologists and biologists in general

Pathophysiology, Homeostasis and Nursing Roger Watson, Tonks Fawcett, 2003 Pathophysiology Homeostasis and Nursing shows clearly how understanding physiology can improve nursing care and covers the main issues that relate to basic observations

The Thermal Human Body Kurt Ammer, Francis Ring, 2019-05-13 This book is a guide for the constantly growing community of the users of medical thermal imaging It describes where and how an infrared equipment can be used in a strictly standardised way and how one can ultimately comprehensively report the findings Due to their insight into the complex mechanisms behind the distribution of surface temperature future users of medical thermal imaging should be able to provide careful and cautious interpretations of infrared thermograms thus avoiding the pitfalls of the past The authors are well known pioneers of the technique of infrared imaging in medicine who have combined strict standard based evaluation of medical thermal images with their expertise in clinical medicine and related fields of health management

Advanced Biology Michael Kent, 2000-07-06 Written by an experienced teacher of students this book aims to motivate A Level students Questions are presented in two styles Quick Check and Food for Thought to give opportunities to practise both recall and analytical skills It includes colour illustrations and graduated questions to practise recall and analytical skills

Spacecraft Thermal Control Handbook: Cryogenics David G. Gilmore, 2002 The number of satellite systems that require some form of cryogenic cooling has grown enormously over the last several years With so many engineers scientists and technicians working on cryogenic systems for the first time in their careers the need for a single resource that touched on all the technologies relevant to cryogenics was apparent

Performance Frank E. Marino, 2008-01-01 Over the last decades our understanding of the relationship between thermoregulation performance and fatigue has changed dramatically New advances in technology and methodology permitted the study of rising and decreasing body temperature on metabolism and provided insights into the role the nervous system plays in determining human performance under thermally stressful situations Further analysis of previous research has been necessary in addition to considering theories derived from complimentary areas of research such as evolutionary biology anthropology and cellular and molecular biology This publication provides different interpretations of recent research for a better understanding of the limitations of thermoregulation In particular it presents evidence for the human s ability to anticipate thermal limits and adjust their performance accordingly so that cellular homeostasis is preserved Further the book is featuring the inclusion of the effect of reduced body temperature on muscular performance and endurance which today is a popular method for providing avenues of reduced thermal strain and recovery from exercise This publication will be an essential read for those working in thermal medicine exercise physiology and human performance *Sensory Systems: II*
