

The background of the slide is white and decorated with several hand-drawn illustrations of strawberries. The strawberries are red with green leaves and are scattered across the page. Some are large and detailed, while others are smaller and simpler. The text "TOMORROW IS..." is centered in the middle of the slide in a dark blue, handwritten-style font.

TOMORROW IS...

Formal Approaches to Software Testing ,2004 **Formal Approaches to Software Testing** Jens Grabowski, Brian Nielsen, 2005-03-07 Testing often accounts for more than 50% of the required effort during system development The challenge for research is to reduce these costs by providing new methods for the specification and generation of high quality tests Experience has shown that the use of formal methods in testing represents a very important means for improving the testing process Formal methods allow for the analysis and interpretation of models in a rigorous and precise mathematical manner The use of formal methods is not restricted to system models only Test models may also be examined Analyzing system models provides the possibility of generating complete test suites in a systematic and possibly automated manner whereas examining test models allows for the detection of design errors in test suites and their optimization with respect to readability or compilation and execution time Due to the numerous possibilities for their application formal methods have become more and more popular in recent years The Formal Approaches in Software Testing FATES workshop series also benefits from the growing popularity of formal methods After the workshops in Aalborg Denmark 2001 Brno Czech Republic 2002 and Montreal Canada 2003 FATES 2004 in Linz Austria was the fourth workshop of this series Similar to the workshop in 2003 FATES 2004 was organized in a liaison with the IEEE ACM Conference on Automated Software Engineering ASE 2004 FATES 2004 received 41 submissions Each submission was reviewed by at least three independent reviewers from the Program Committee with the help of some additional reviewers Based on their evaluations 14 full papers and one work in progress paper from 11 different countries were selected for presentation Elements of Hypermedia Design: Techniques for Navigation & Visualization in Cyberspace Peter Gloor, 2013-11-11 The hypermedia authoring process has been vividly described in a special issue of the Economist as a combination of writing a book a play a film and a radio or television show A hypermedia document combines all these elements and adds some of its own The author s first job is to structure and explain all of the information The author then must distill the information into brief descriptive nodes Each node has to contain a list of the ingredients and instructions on how the ingredients are mixed together to the greatest advantage The structure of the material provided is translated into an architectural metaphor of some kind much of the designer s work is the creation of this imaginary space Then the designers must chart the details of what to animate what to film who to interview and how to arrange the information in the space to be built Eco95a This book presents guidelines tools

and techniques for prospective authors such that they can design better hypermedia documents and applications It surveys the different techniques used to organize search and structure information in a large information system It then describes the algorithms used to locate reorganize and link data to enable navigation and retrieval It looks in detail at the creation and presentation of certain types of visual information namely algorithm animations It introduces new mechanisms for editing audio and video data streams
