Terms In Context Studies In Corpus Linguistics:

Terms in Context Jennifer Pearson, 1998-05-15 *Terms in Context* applies the methodology that has been developed over the last two decades in corpus linguistics to the relatively new and still little developed field of corpus based terminography. While corpora are already being used by some terminologists for the identification of terms and retrieval of contextual fragments, this book describes the first attempt to use corpora for terminography in much the same way as large general reference corpora are already being used for general language lexicography. The author goes beyond the standard problem of identifying terms as opposed to non terminological lexical items in text and focuses on identifying metalanguage patterns which point to the presence in text of parts of reusable definitions of terms. The author examines these patterns and shows how the information which they contain can be retrieved and used as input for terminological entries. *Terms in Context* should be of interest to traditional terminologists who have not previously considered adopting a corpus based approach to their work or at least not on the scale proposed here to modern terminologists who use text primarily for the identification of terms and the retrieval of contextual examples to those in the corpus linguistic community who have hitherto used general language corpora for the purposes of lexicography and have not previously considered using special purpose corpora for more specific lexicography studies and to academics in the ESP LSP community who are interested in showing students how to use text as a means of ascertaining the meaning of terms. *Corpus Linguistics Beyond the Word*, 2015-07-14 This volume will be of particular interest to readers interested in expanding the applications of corpus linguistics techniques through new tools and approaches. The text includes selected papers from the Fifth North American Symposium hosted by the Linguistics Department at Montclair State University in Montclair New Jersey in May 2004. The symposium papers represented several areas of corpus studies including language development, syntactic analysis, pragmatics and discourse, language change, register variation, corpus creation and annotation and practical applications of corpus work primarily in language teaching but also in medical training and machine translation. A common thread through most of the papers was the use of corpora to study domains longer than the word. Not surprisingly, fully half of the papers deal with the computational tools and linguistic strategies needed to search for and analyze these longer spans of language while most of the remaining papers examine particular syntactic and rhetorical properties of one or more corpora. *Corpus Linguistics in Chinese Contexts* Simon Smith, 2015-07-27 Rapid advances in computing have enabled the integration of corpora into language teaching and learning yet in China corpus methods have not yet been widely adopted. *Corpus Linguistics in Chinese Contexts* aims to advance the state of the art in the use of corpora in applied linguistics and contribute to the expertise in corpus use in China. *Terminology Translation in Chinese Contexts* Saihong Li, William Hope, 2021-02-22 *Terminology Translation in Chinese Contexts* Theory and Practice investigates the theory and practice of terminology translation, terminology management and scholarship within the distinctive milieu of Chinese and explores the complex relationship between

terminology translation micro level and terminology management macro level This book outlines the contemporary challenges of terminology translation and terminology management within Chinese contexts in specialized fields including law the arts religion Chinese medicine and food products The volume also examines how the development and application of new technologies such as big data cloud computing and artificial intelligence have brought about major changes in the language service industry Technology such as machine translation and computer assisted translation has spawned new challenges in terminology management practices and has facilitated their evolution in contexts of ever greater internationalization and globalization This book recontextualizes terminology translation and terminology management with a special focus on English Chinese translation It is hoped that the volume will enable and enhance dialogue between Chinese and Western scholars and professionals in the field All chapters have been written by specialists in the different subfields and have been peer reviewed by the editors
