Ternary Superconductors:

Superconductivity in Ternary Compounds II Merrill B. Maple, 2013-11-11 **Superconductivity in Ternary Compounds I** O. Fischer, L.B. Maple, 2012-12-06 The structural electronic and lattice properties of superconducting ternary compounds are the subject of this Topics volume Its companion volume Topics in Current Physics Volume 34 deals primarily with the mutual interaction of superconductivity and magnetism in ternary compounds These two volumes are the culmination of a project started nearly two years ago that was inspired by the intense research effort both experimental and theoretical then being expended to explore and develop an understanding of the remarkable physical properties of ternary superconductors Research activity on this subject has increased in the meantime The interest in ternary superconductors originated in 1972 when B T Matthias and his co workers first discovered superconductivity in several ternary molybdenum sulfide compounds that had been synthesized in 1971 by R Chevrel M Sergent and J Prigent The superconducting critical temperature T_c of one of the compounds $PbMoS$ was reported to be 15 K This value is sufficiently high that there was good reason to expect that other ternary compounds would be found with superconducting transition temperatures rivaling those of the A15 compounds of which Nb₃Ge has the record high T_c of 23 K The interest in ternary superconductors received further impetus when several of the ternary molybdenum sulfides were found to have exceptionally high upper critical magnetic fields some of them in the neighborhood of 50 Tesla or more An immense amount of research on ternary molybdenum chalcogenides then followed Ternary Superconductors Bobby David Dunlap, 1981 **Superconductors** A. V. Narlikar, 2014-04 Unusual and unconventional features of a large variety of novel superconductors are presented and their technological potential as practical superconductors assessed *Superconductivity in Ternary Compounds II* M.B. Superconductivity in Magnetic and Exotic Materials T. Matsubara, A. Kotani, 2012-12-06 The sixth Taniguchi Symposium on the Theory of Condensed Matter was held between 14-18 November 1983 at Kashikojima Japan During the Symposium about twenty participants lived together and discussed the magnetic superconductors and related problems in an active and friendly atmosphere This volume contains the papers presented at this Symposium A strong impetus for organizing a Symposium of this subject is afforded by recent intense interest and accumulated information on magnetic and other novel superconductors newly discovered and indeed the Symposium has produced many excellent contributions to this very exciting field of condensed matter theory as reported in this volume In order to give the readers a general outline of the subject a brief sketch of the problem is made in the Introduction Then the remainder of this volume is divided into four Parts and an Appendix Part I is devoted to discussions on several aspects of ferromagnetic superconductors including

superconductivity in heavy fermion systems Part II treats problems on anti ferromagnetic superconductors In Part III three papers on organic superconductors are presented Part IV includes discussions on the exotic superconductors The Appendix is concerned with the new research project towards high T_c superconductors in Japan The last but not least remark is to mention the activity of the Taniguchi Foundation whose support makes this Symposium possible For many years Mr

Advances in Superconductivity XI N. Koshizuka, S. Tajima, 2013-11-11 The 11th International Symposium on Superconductivity was held November 16 19 1998 in Fukuoka Japan Convened annually since 1988 the symposium covers the whole field of superconductivity from fundamental physics and chemistry to new applications At the 11th Symposium there was increased interest reported in the development of trial devices using bismuth wires and yttrium based bulk materials Among the presentations were those that clearly defined the development targets for next generation yttrium based wires and bulk materials and single flux quantum SFQ circuits Other popular topics were high temperature superconductivity applications such as SQUIDS microwave filters and cryocooler cooled magnets With more than 600 participants from 18 countries the symposium provided an excellent forum for exchanges of the most recent information in the field of superconductivity

Theory of Heavy Fermions and Valence Fluctuations Tadao Kasuya, Tetsuro Saso, 2012-12-06 This volume contains the proceedings of the Eighth Taniguchi International Symposium on the Theory of Condensed Matter which was held at Shima Kanko Hotel in Shima Japan 10 13 April 1985 The topic of the Symposium was Valence Fluctuation and Heavy Fermion Systems one of the most fundamental problems in present day condensed matter physics The dilute

Kondo problem which is one of the most typical and unique many body problems in condensed matter physics developed recently into the dense Kondo and the coherent Kondo lattice problems in the 4f electron systems. It is accepted now that a large degeneracy in f electron systems makes this latter situation possible by enhancing the single site Kondo state relative to the inter site magnetic interactions. Now anomalous behavior in f electron systems show rich variety and are called valence fluctuation phenomena as a whole. They have however a common feature. In the lowest temperature region they show either heavy Fermion like character or a narrow gap formation at the Fermi energy. Discovery of superconductivity in the heavy Fermion systems is attracting more interest. Anyway the valence fluctuating states are thought to be of fundamental importance to bridge the gap between the localized magnetic states and the delocalized nonmagnetic states.
