The Four-Color Problem ,2011-08-29 The Four Color Problem **The Four-color Problem** Thomas L. Saaty,Paul C. Kainen,1977 *The Four-Color Theorem* Rudolf Fritsch,Gerda Fritsch,2012-12-06 During the university reform of the 1970s the classical Faculty of Science of the venerable Ludwig Maximilians Universitat in Munich was divided into five smaller faculties One was for mathematics the others for physics chemistry and pharmaceuticals biology and the earth sciences Nevertheless in order to maintain an exchange of ideas between the various disciplines and so as not to permit the complete undermining of the original notion of universitas l the Carl Friedrich von Siemens Foundation periodically invites the professors from the former Faculty of Science to a luncheon gathering These are working luncheons during which recent developments in the various disciplines are presented by means of short talks The motivation for such talks does not come in the majority of cases from the respective subject itself but from another discipline that is loosely affiliated with it In this way the controversy over the modern methods used in the proof of the Four Color Theorem had also spread to disciplines outside of mathematics I as a trained algebraic topologist was asked to comment on this Naturally I was acquainted with the Four Color 1 A Latin word meaning the whole of something a collective entirety VII viii Preface Problem but up to that point had never intensively studied it As an outsider 2 I dove into the material not so much to achieve any scientific progress with it but to make this already achieved objective more understandable **Graphs, Colourings and the Four-colour Theorem** Robert Wilson,2002 This textbook for mathematics undergraduates graduates and researchers discusses the proof of the four colour theorem one of the most famous of the long standing mathematical problems solved in the 20th century **Map Coloring, Polyhedra and the FourColor Problem** David W. Barnette,1984-03-01 The Four-Color Theorem and Basic Graph Theory Chris McMullen,2020-05-26 Explore a variety of fascinating concepts relating to the four color theorem with an accessible introduction to related concepts from basic graph theory From a clear explanation of Heawood s disproof of Kempe s argument to novel features like quadrilateral switching this book by Chris McMullen Ph D is packed with content It even includes a novel handwaving argument explaining why the four color theorem is true What is the four color theorem Why is it common to work with graphs instead of maps What are Kempe chains What is the problem with Alfred Kempe s attempted proof How does Euler s formula relate the numbers of faces edges and vertices What are Kuratowski s theorem and Wagner s theorem What is the motivation behind triangulation What is quadrilateral switching What is vertex splitting What is the three edges theorem Is there an algorithm for four coloring a map or graph What is a Hamiltonian cycle What is a separating triangle How is the four color theorem like an ill conditioned logic puzzle Why is the four color theorem true What makes the four color theorem so difficult to prove by hand **Four Colors Suffice** Robin J. Wilson,2002 On October 23 1852 Professor Augustus De Morgan wrote a letter to a colleague unaware that he was launching one of the most famous mathematical conundrums in history one that would confound thousands of puzzlers for more than a century This is the

amazing story of how the map problem was solved The problem posed in the letter came from a former student What is the least possible number of colors needed to fill in any map real or invented so that neighboring counties are always colored differently This deceptively simple question was of minimal interest to cartographers who saw little need to limit how many colors they used But the problem set off a frenzy among professional mathematicians and amateur problem solvers among them Lewis Carroll an astronomer a botanist an obsessive golfer the Bishop of London a man who set his watch only once a year a California traffic cop and a bridegroom who spent his honeymoon coloring maps In their pursuit of the solution mathematicians painted maps on doughnuts and horseshoes and played with patterned soccer balls and the great rhombicuboctahedron It would be more than one hundred years and countless colored maps later before the result was finally established Even then difficult questions remained and the intricate solution which involved no fewer than 1 200 hours of computer time was greeted with as much dismay as enthusiasm Providing a clear and elegant explanation of the problem and the proof Robin Wilson tells how a seemingly innocuous question baffled great minds and stimulated exciting mathematics with far flung applications This is the entertaining story of those who failed to prove and those who ultimately did prove that four colors do indeed suffice to color any map Four Colors Suffice Robin Wilson, 2021-10-12 On October 23 1852 Professor Augustus De Morgan wrote a letter to a colleague unaware that he was launching one of the most famous mathematical conundrums in history one that would confound thousands of puzzlers for more than a century This is the amazing story of how the map problem was solved The problem posed in the letter came from a former student What is the least possible number of colors needed to fill in any map real or invented so that neighboring counties are always colored differently This deceptively simple question was of minimal interest to cartographers who saw little need to limit how many colors they used But the problem set off a frenzy among professional mathematicians and amateur problem solvers among them Lewis Carroll an astronomer a botanist an obsessive golfer the Bishop of London a man who set his watch only once a year a California traffic cop and a bridegroom who spent his honeymoon coloring maps In their pursuit of the solution mathematicians painted maps on doughnuts and horseshoes and played with patterned soccer balls and the great rhombicuboctahedron It would be more than one hundred years and countless colored maps later before the result was finally established Even then difficult questions remained and the intricate solution which involved no fewer than 1 200 hours of computer time was greeted with as much dismay as enthusiasm Providing a clear and elegant explanation of the problem and the proof Robin Wilson tells how a seemingly innocuous question baffled great minds and stimulated exciting mathematics with far flung applications This is the entertaining story of those who failed to prove and those who ultimately did prove that four colors do indeed suffice to color any map This new edition features many color illustrations It also includes a new foreword by Ian Stewart on the importance of the map problem and how it was solved *The Four Color Problem; a Lecture Given at the Galois Institute of Mathematics at Long Island University* Philip Franklin, 1936 Maximal
