Small Wonders Endless Frontiers A Review Of The National Nanotechnology Initiative:

Small Wonders, Endless Frontiers National Research Council, Division on Engineering and Physical Sciences, Committee for the Review of the National Nanotechnology Initiative, 2002-10-10 Nanoscale science and technology often referred to as nanoscience or nanotechnology are science and engineering enabled by our relatively new ability to manipulate and characterize matter at the level of single atoms and small groups of atoms This capability is the result of many developments in the last two decades of the 20th century including inventions of scientific instruments like the scanning tunneling microscope Using such tools scientists and engineers have begun controlling the structure and properties of materials and systems at the scale of 10^{-9} meters or $1/100,000$ the width of a human hair Scientists and engineers anticipate that nanoscale work will enable the development of materials and systems with dramatic new properties relevant to virtually every sector of the economy such as medicine telecommunications and computers and to areas of national interest such as homeland security Indeed early products based on nanoscale technology have already found their way into the marketplace and into defense applications In 1996 as the tremendous scientific and economic potential of nanoscale science and technology was beginning to be recognized a federal interagency working group formed to consider creation of a national nanotechnology initiative NNI As a result of this effort around 1 billion has been directed toward NNI research since the start of FY 2001 At the request of officials in the White House National Economic Council and agencies that are participating in NNI the National Research Council NRC agreed to review the NNI The Committee for the Review of the National Nanotechnology Initiative was formed by the NRC and asked to consider topics such as the current research portfolio of the NNI the suitability of federal investments and interagency coordination efforts in this area **The National Nanotechnology Initiative** United States. Congress. House. Committee on Science. Subcommittee on Research, 2005

National Nanotechnology Initiative (NNI) John F. Sargent (Jr), 2011-05 Nanotechnology NT a term encompassing the science engineering and applications of sub micron materials involves the harnessing of unique physical chemical and biological properties of nanoscale substances in fundamentally new and useful ways The economic and societal promise of NT has led to substantial and sustained investments by governments and co around the world In 2000 the U S launched the world's first national NT program From FY 2001 through FY 2010 the fed gov't invested 12.4 billion in nanoscale science engineering and technology through the NNI Contents of this report Intro Overview NNI Selected NNI Reports and Assessments NT Legislation in the 111th Congress Illus A print on demand report The National Nanotechnology Initiative at Five Years President's Council of Advisors on Science and Technology (U.S.), 2005 Represents the President's Council of Advisors on Science and Technology's PCAST first assessment of the Federal Government's nanotechnology research efforts Examines four primary concerns Where do we stand Is this money well spent and the program well managed Are we addressing societal concerns and potential risks and How can we do better **Nanotechnology Research Directions for**

Societal Needs in 2020 Mihail C. Roco, Chad A. Mirkin, Mark C. Hersam, 2011-06-17 This volume presents a comprehensive perspective on the global scientific technological and societal impact of nanotechnology since 2000 and explores the opportunities and research directions in the next decade to 2020 The vision for the future of nanotechnology presented here draws on scientific insights from U S experts in the field examinations of lessons learned and international perspectives shared by participants from 35 countries in a series of high level workshops organized by Mike Roco of the National Science Foundation NSF along with a team of American co hosts that includes Chad Mirkin Mark Hersam Evelyn Hu and several other eminent U S scientists The study performed in support of the U S National Nanotechnology Initiative NNI aims to redefine the R D goals for nanoscale science and engineering integration and to establish nanotechnology as a general purpose technology in the next decade It intends to provide decision makers in academia industry and government with a nanotechnology community perspective of productive and responsible paths forward for nanotechnology R D *Nanotalk* Rosalyn W. Berne, 2005-08-31 No one really knows where nanotechnology is leading what its pursuit will mean and how it may affect human and other forms of life Nevertheless its research and development are moving briskly into that unknown Nanotalk is a book of conversations and explorations with thirty five such nano research scientists and engineers who share their ideas

Governing Future Technologies Mario Kaiser, Monika Kurath, Sabine Maasen, Christoph Rehmann-Sutter, 2009-10-29 Nanotechnology has been the subject of extensive assessment hype unlike any previous field of research and development A multiplicity of stakeholders have started to analyze the implications of nanotechnology Technology assessment institutions around the world non governmental organizations think tanks re insurance companies and academics from science and technology studies and applied ethics have turned their attention to this growing field s implications In the course of these assessment efforts a social phenomenon has emerged a phenomenon the editors define as assessment regime Despite the variety of organizations methods and actors involved in the evaluation and regulation of emerging nanotechnologies the assessment activities comply with an overarching scientific and political imperative Innovations are only welcome if they are assessed against the criteria of safety sustainability desirability and acceptability So far such deliberations and reflections have played only a subordinate role This book argues that with the rise of the nanotechnology assessment regime however things have changed dramatically Situated at the crossroads of democratizing science and technology good governance and the quest for sustainable innovations the assessment regime has become constitutive for technological development The contributions in this book explore and critically analyse nanotechnology s assessment regime To what extent is it constitutive for technology in general for nanotechnology in particular What social conditions render the regime a phenomenon sui generis And what are its implications for science and society

Nanotoxicology and Nanoecotoxicology Vol. 1 Vineet Kumar, Praveen Guleria, Shivendu Ranjan, Nandita Dasgupta, Eric Lichtfouse, 2021-04-13 This book discusses the basics of nanotoxicity and gives a detailed account of methods

used for toxicity evaluation of nanomaterials. It also gives in-depth coverage of the effect of different types of nanomaterials including organic and inorganic on various aquatic animals, microorganisms, and plants, and outlines recent challenges, regulatory frameworks, and advances in nanotoxicity testing.

Nanotechnology Research and Development Act of 2003 United States. Congress. House. Committee on Science, 2003. *America Inc.?* Linda Weiss, 2014-04-01. For more than half a century, the United States has led the world in developing major technologies that drive the modern economy and underpin its prosperity. In *America Inc.*, Linda Weiss attributes the U.S. capacity for transformative innovation to the strength of its national security state: a complex of agencies, programs, and hybrid arrangements that has developed around the institution of permanent defense preparedness and the pursuit of technological supremacy. She examines how that complex emerged and how it has evolved in response to changing geopolitical threats and domestic political constraints from the Cold War period to the post 9/11 era. Weiss focuses on state-funded venture capital funds, new forms of technology procurement by defense and security-related agencies, and innovation in robotics, nanotechnology, and renewable energy since the 1980s. Weiss argues that the national security state has been the crucible for breakthrough innovations, a catalyst for entrepreneurship, and the formation of new firms, and a collaborative network coordinator for private sector initiatives. Her book appraises persistent myths about the military-commercial relationship at the core of the National Security State. Weiss also discusses the implications for understanding U.S. capitalism, the American state, and the future of American primacy as financialized corporations curtail investment in manufacturing and innovation.
