Temporal Logic: Understanding Reactive Systems Pasquale De Marco, Temporal logic is a powerful formal language for specifying and reasoning about the behavior of systems over time It has been successfully applied in a wide range of domains including reactive systems concurrent systems real time systems hybrid systems probabilistic systems game theory and artificial intelligence In this book we provide a comprehensive introduction to temporal logic covering both the theoretical foundations and the practical applications of the logic We start with the basics of propositional temporal logic and first order temporal logic and then move on to more advanced topics such as linear temporal logic computation tree logic hybrid logic and probabilistic temporal logic We also discuss the use of temporal logic in the specification and verification of reactive systems concurrent systems real time systems hybrid systems probabilistic systems games and artificial intelligence systems We cover both model checking and theorem proving techniques and provide numerous examples to illustrate the practical use of temporal logic This book is intended for a broad audience including computer scientists engineers mathematicians and philosophers It is also suitable for graduate students and advanced undergraduates who are interested in learning about temporal logic and its applications We believe that this book will be a valuable resource for anyone who wants to understand and use temporal logic to specify and reason about the behavior of complex systems Temporal logic is a powerful tool for reasoning about the behavior of systems over time It is used in a wide variety of applications including the specification and verification of reactive systems concurrent systems real time systems hybrid systems probabilistic systems games and artificial intelligence systems This book provides a comprehensive introduction to temporal logic covering both the theoretical foundations and the practical applications of the logic It is intended for a broad audience including computer

Crossley,Jeffrey B. Remmel,Richard Shore,Moss E. Sweedler,1994-01-26 The twenty six papers in this volume reflect the wide and still expanding range of Anil Nerode s work A

conference on Logical Methods was held in honor of Nerode s sixtieth birthday 4 June 1992 at the Mathematical Sciences Institute Cornell University 1 3 June 1992 Some of the conference papers are here but others are from students co workers and other colleagues The intention of the conference was to look forward and to see the directions currently being pursued in the development of work by or with Nerode Here is a brief summary of the contents of this book We give a retrospective view of Nerode s work A number of specific areas are readily discerned recursive equivalence types recursive algebra and model theory the theory of Turing degrees and r e sets polynomial time computability and computer science Nerode began with automata theory and has also taken a keen interest in the history of mathematics All these areas are represented The one area missing is Nerode s applied mathematical work relating to the environment Kozen s paper builds on Nerode s early work on automata Recursive equivalence types are covered by Dekker and Barback the latter using directly a fundamental metatheorem of Nerode Recursive algebra is treated by Ge Richards group representations Recursive model theory is the subject of papers by Hird Moses and Khoussainov Dadajanov while a combinatorial problem in recursive model theory is discussed in Cherlin Martin s paper Cenzer presents a paper on recursive dynamics _Verification, Model Checking, and Abstract Interpretation_ Gilles Barthe,Manuel Hermenegildo,2010-01-06 This volume contains the proceedings of the 11th International Conference on Veri cation Model Checking and Abstract Interpretation VMCAI 2010 held in Madrid Spain January 17 19 2010 VMCAI 2010 was the 11th in a series of meetings Previous meetings were held in Port Je erson 1997 Pisa 1998 Venice 2002 New York 2003 Venice 2004 Paris 2005 Charleston 2006 Nice 2007 SanFrancisco 2008 and Savannah 2009 VMCAI centers on state of the art research relevant to analysis of programs and systems and drawn from three research communities veri cation model checking and abstract interpretation A goal is to facilitate interaction cro fertilization and the advance of hybrid methods that combine two or all three areas Topics covered by VMCAI include program veri cation program cert cation model checking debugging techniques abstract interpretation abstract domains static analysis type systems deductive methods and optimization The Program Committee selected 21 papers out of 57 submissions based on anonymous reviews and discussions in an electronic Program Committee me ing The principal selection criteria were relevance and quality ECOOP '95 - Object-Oriented Programming Walter Olthoff,2003-05-16 For the ninth time now the European Conference on Object Oriented P gramming provides a mid summer gathering place for researchers practitioners students and newcomers in the field of object technology Despite fierce c petition from an increasing number of attractive conferences on object related topics ECOOP has successfully positioned itself as the premier European ject technology conference One reason is without doubt the composition of the conference week and the nature of its events Running in parallel on the first two days a comprehensive tutorial program and a very selective workshop program are offered to attendees This is followed by a three day technical p gram organized in a single track providing a highly communicative atmosphere of scientific exchange and learning Overlapping with these events are a two day industrial
