Longfellow reinvented himself as a creative artist transforming his loss and the nation's suffering in the Civil War and postwar period into compelling art. In this book Jeffrey Hotz interprets the distinct phases of Longfellow's late career exploring his narrative poetry translations personal lyrics religious poetry aesthetic verse and end of life vision of mortality as a journey. He considers Longfellow's friendships and family life publication strategies and literary reputation and the recurrent theme of longing for an ideal female figure in his poems and private life. Interweaving unpublished poems and poem fragments with interpretations of published collections Longfellow's Imaginative Engagement examines the poet's complex voice which captured the public's imagination making him America's most famous poet in the nineteenth century.

Ten Thousand Years Walter M. Hladý, 1970 **The Periodic Table I** D. Michael P. Mingos, 2020-02-05

As 2019 has been declared the International Year of the Periodic Table it is appropriate that Structure and Bonding marks this anniversary with two special volumes. In 1869 Dmitri Ivanovitch Mendeleev first proposed his periodic table of the elements. He is given the major credit for proposing the conceptual framework used by chemists to systematically interrelate the chemical properties of the elements. However the concept of periodicity evolved in distinct stages and was the culmination of work by other chemists over several decades. For example Newland's Law of Octaves marked an important step in the evolution of the periodic system since it represented the first clear statement that the properties of the elements repeated after intervals of 8. Mendeleev's predictions demonstrated in an impressive manner how the periodic table could be used to predict the occurrence and properties of new elements. Not all of his many predictions proved to be valid but the discovery of scandium gallium and germanium represented sufficient vindication of its utility and they cemented its enduring influence. Mendeleev's periodic table was based on the atomic weights of the elements and it was another 50 years before Moseley established that it was the atomic number of the elements that was the fundamental parameter and this led to the prediction of further elements. Some have suggested that the periodic table is one of the most fruitful ideas in modern science and that it is comparable to Darwin's theory of evolution by natural selection proposed at approximately the same time. There is no doubt that the periodic table occupies a central position in chemistry. In its modern form it is reproduced in most undergraduate inorganic textbooks and is present in almost every chemistry lecture room and classroom. This first volume provides chemists with an account of the historical development of the Periodic Table and an overview of how the Periodic Table has evolved over the last 150 years. It also illustrates how it has guided the research programmes of some distinguished chemists.

Ten Materials That Shaped Our World M. Grant Norton, 2025-07-17

This Premium Edition of Ten Materials That Shaped Our World is part of a small audiobook pilot program at Springer Nature. It includes audio files accessible online via the Springer Nature MoreMedia App. This book examines ten materials: flint, clay, iron, gold, glass, cement, rubber, polyethylene, aluminum, and silicon, explaining how they formed, how we discovered them, why they have the properties they do, and how they have transformed our lives. Since the dawn of the Stone Age we have shaped materials to meet our needs and in turn

those materials have shaped us The fracturing of flint created sharp curved surfaces that gave our ancestors an evolutionary edge Molding clay and then baking it in the sun produced a means of recording the written word and exemplified human artistic imagination As our ability to control heat improved earthenware became stoneware and eventually porcelain the most prized ceramic of all Iron cast at high temperatures formed the components needed for steam engines locomotives and power looms the tools of the Industrial Revolution Gold has captivated humans for thousands of years and has recently found important uses in biology medicine and nanotechnology Glass shaped into early and imperfect lenses not only revealed the microscopic world of cells and crystals but also allowed us to discover stars and planets beyond those visible with the naked eye Silicon revolutionized the computer propelling us into the Information Age and with it our interconnected social networks the Internet of Things and artificial intelligence Written by a materials scientist this book explores not just why but also how certain materials came to be so fundamental to human society This enlightening study captivates anyone interested in learning more about the history of humankind our ingenuity and the materials that have shaped our world
