semantics while building graph traversal queries Get up and running with advanced Cypher concepts like List Maps  
 OPTIONAL MATCH Master best practices in writing effective queries leveraging data modeling and patterns Book  
 Description While it is easy to learn and understand the Cypher declarative language for querying graph databases it can be  
 very difficult to master it As graph databases are becoming more mainstream there is a dearth of content and guidance for  
 developers to leverage database capabilities fully This book fills the information gap by describing graph traversal patterns in  
 a simple and readable way This book provides a guided tour of Cypher from understanding the syntax building a graph data  
 model and loading the data into graphs to building queries and profiling the queries for best performance It introduces APOC  
 utilities that can augment Cypher queries to build complex queries You ll also be introduced to visualization tools such as  
 Bloom to get the most out of the graph when presenting the results to the end users After having worked through this book  
 you ll have become a seasoned Cypher query developer with a good understanding of the query language and how to use it  
 for the best performance What you will learn Write Cypher queries from basic to advanced level Map the source data to the  
 graph data model in an iterative fashion Load the data into a graph using LOAD CSV APOC and client drivers Map the  
 business questions to graph queries effectively Identify query performance issues and fix them Extend capabilities of Cypher  
 using APOC utilities Work with graph visualization tools like Bloom and Browser Who this book is for This book is targeted at  
 Database Administrator Database Developers Graph Database Developers and Graph Database Architects This book will also  
 help someone migrate from a DBA role to a graph data engineer or data scientist If you are working with graph databases  
 and need to learn Cypher or are a basic Cypher developer who wants to get better at data modeling and tuning queries to  
 build performant Cypher queries then this is the book for you     *Simulation of Industrial Systems* David Elizandro, Hamdy
