*Assuring the U.S. Department of Defense a Strong Science, Technology, Engineering, and Mathematics (STEM) Workforce* National Research Council, National Academy of Engineering, Policy and Global Affairs, Board on Higher Education and Workforce, Division on Engineering and Physical Sciences, Committee on Science, Technology, Engineering, and Mathematics Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base, 2012-12-01 The ability of the nation s military to prevail during future conflicts and to fulfill its humanitarian and other missions depends on

continued advances in the nation's technology base. A workforce with robust Science Technology Engineering and Mathematics (STEM) capabilities is critical to sustaining U.S. preeminence. Today, however, the STEM activities of the Department of Defense (DOD) are a small and diminishing part of the nation's overall science and engineering enterprise. Assuring the U.S. Department of Defense a Strong Science Technology Engineering and Mathematics (STEM) Workforce presents five principal recommendations for attracting, retaining, and managing highly qualified STEM talent within the department based on an examination of the current STEM workforce of DOD and the defense industrial base. As outlined in the report, DOD should focus its investments to ensure that STEM competencies in all potentially critical emerging topical areas are maintained at least at a basic level within the department and its industrial and university bases. *Journal of Research of the National Institute of Standards and Technology*, 2001. Reports NIST research and development in the physical and engineering sciences in which the Institute is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Emphasis on measurement methodology and the basic technology underlying standardization.

National Research Council, National Academy of Engineering, Committee on Science, Technology, Engineering, and Mathematics Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base, 2012-02-21. Report of a Workshop on Science Technology Engineering and Mathematics (STEM) Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base is the summary of a workshop held August 11, 2011, as part of an 18-month study of the issue. This book assesses the STEM capabilities that the Department of Defense (DOD) needs in order to meet its goals, objectives, and priorities; to assess whether the current DOD workforce and strategy will meet those needs; and to identify and evaluate options and recommend strategies that the department could use to help meet its future STEM needs. **Index of Specifications and Standards**, 2000. Christian Ulrik Andersen, Søren Bro Pold, 2011-01-12. From the screen of our laptops and from the ubiquitous portable devices, smart phones and media players to the embedded computation in clothes, architecture, and big urban screens, interfaces are everywhere. They are simultaneously demanding our attention and computing quietly in the background, turning action into interaction and mediating our experience of and relations to the social and environmental. But how can aesthetics respond to this, and how do interfaces set the scene for artistic practices?

Interface Criticism is not another design manual but a critical investigation for readers interested in the aesthetic cultural and political dimensions of interfaces With contributions from leading researchers within the field the book covers a wide range of aesthetic expressions including urban screens wearable interfaces performances games net art software art and sound art and discusses how new cultures evolve around for example open source or live coding The volume critically investigates the aesthetics of interfaces in ways that transcend the iconic surface of the graphical user interface and goes beyond the buttons Ultimately the book develops interface aesthetics as an appropriate paradigm for a critical discussion of the computer
