The Floodplain Forests In Europe Current Situations And Perspectives Research Report European Forest Institute 1:

Restoring Floodplains in Europe Timothy Moss, Jochen Monstadt, 2008-02-15 This book addresses the complex institutional dimensions to restoring floodplains. Despite the recent surge of interest in restoring floodplains among policy and research circles as well as in the public domain, very few schemes for restoring functional floodplains have been put into practice in Europe to date. The book explores the reasons behind this discrepancy between interest and applications with an original comparative analysis of the institutional drivers and constraints of floodplain restoration in Europe. It explains why so few projects have been successfully implemented, how recent policy shifts are creating new opportunities for floodplain restoration, and what lessons for policy development and project management can be drawn from in-depth analysis of past and present schemes. At a time of rapidly growing interest in restoring floodplains as an important component of efforts to improve flood protection, enhance riparian habitats, strengthen catchment management, raise water quality, and pursue integrated rural development, the book critically appraises the relationship between macro-level policy development and enforcement and micro-level project design and implementation. The book begins with two chapters setting out the case for floodplain restoration and assessing the relevant drivers and constraints of EU policy. The next three chapters analyse the policy contexts of floodplain restoration in France, Germany, and Britain, addressing the principal drivers and constraints in the fields of water management, flood protection, nature conservation, spatial planning, and agriculture. This is followed by six case studies of schemes to restore floodplains, divided between early schemes of the mid 1990s (Rheinvorland Süd on the Upper Rhine, Bourret on the Garonne, and the Long Eau project in England) and ongoing schemes of today (Lenzen on the Elbe, La Basse on the Seine, and the Parrett Catchment Project). The book concludes by drawing lessons from the principal findings and providing recommendations for ways of developing policy and designing projects for restoring floodplains in the future.

A Goal-Oriented Approach to Forest Landscape Restoration John Stanturf, Palle Madsen, David Lamb, 2012-12-05 While restoration ecology has traditionally aimed to re-create some putative more natural ecological state, forest landscape restoration (FLR) has emerged over the last decade as an approach aimed more at restoring natural functions while focusing on meeting human needs. With a view to exploring the practical potential of this approach, this book draws together a team of experts from the natural and social sciences to discuss its success so far in addressing critical issues such as biodiversity, ecological function, and human livelihoods. Applying principles of landscape ecology, restoration ecology, planning theory, and conflict management, the book presents a series of case studies which document the approach and discusses how the approach can help with priority setting for the future. The book will provide a valuable reference to graduate students and researchers interested in ecological restoration, forest ecology and management, as well as to professionals in environmental restoration, natural resource management, conservation, and environmental policy. Ecology of Central European Forests

Christoph Leuschner, Heinz Ellenberg, 2017-09-22 This handbook in two volumes synthesises our knowledge about the ecology of Central Europe's plant cover with its 7000 yr history of human impact covering Germany Poland the Netherlands Belgium Luxembourg Switzerland Austria Czech Republic and Slovakia Based on a thorough literature review with 5500 cited references and nearly 1000 figures and tables the two books review in 26 chapters all major natural and man made vegetation types with their climatic and edaphic influences the structure and dynamics of their communities the ecophysiology of important plant species and key aspects of ecosystem functioning Volume I deals with the forests and scrub vegetation and analyses the ecology of Central Europe's tree flora whilst Volume II is dedicated to the non forest vegetation covering mires grasslands heaths alpine habitats and urban vegetation The consequences of over use pollution and recent climate change over the last century are explored and conservation issues addressed

River Restoration Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia
