Sören Halldén

The Foundations Of Decision Logic:

The Foundations of Decision Logic Sören Halldén, 1980 **Foundations Of Decision-making Agents: Logic, Probability, And Modality** Subrata Das, 2008-01-03 This self contained book provides three fundamental and generic approaches logical probabilistic and modal to representing and reasoning with agent epistemic states specifically in the context of decision making Each of these approaches can be applied to the construction of intelligent software agents for making decisions thereby creating computational foundations for decision making agents In addition the book introduces a formal integration of the three approaches into a single unified approach that combines the advantages of all the approaches Finally the symbolic argumentation approach to decision making developed in this book combining logic and probability offers several advantages over the traditional approach to decision making which is based on simple rule based expert systems or expected utility theory **Logic and the Foundations of Game and Decision Theory - LOFT 8** Giacomo Bonanno, Benedikt Löwe, Wiebe van der Hoek, 2010-08-19 This book constitutes the refereed proceedings of the 8th International Conference on Logic and the Foundations of the Theory of Game and Decision Theory LOFT8 2008 held in Amsterdam The Netherlands July 2008 This volume is based on a selection of the presented papers and invited talks They survived a thorough and lengthy reviewing process The LOFT conferences are interdisciplinary events that bring together researchers from a variety of fields computer science economics game theory linguistics logic multi agent systems psychology philosophy social choice and statistics Its focus is on the general issue of rationality and agency The papers collected in this volume reflect the contemporary interests and interdisciplinary scope of the LOFT conferences The Foundations of Causal Decision Theory James M. Joyce, 1999-04-13 This book defends the view that any adequate account of rational decision making must take a decision maker s beliefs about causal relations into account The early chapters of the book introduce the non specialist to the rudiments of expected utility theory The major technical advance offered by the book is a representation theorem that shows that both causal decision theory and its main rival Richard Jeffrey s logic of decision are both instances of a more general conditional decision theory The book solves a long standing problem for Jeffrey s theory by showing for the first time how to obtain a unique utility and probability representation for preferences and judgements of comparative likelihood The book also contains a major new discussion of what it means to suppose that some event occurs or that some proposition is true The most complete and robust defence of causal decision theory available **Decision, Probability and Utility** Peter Gärdenfors, Nils-Eric Sahlin, 1988-04-29 Decision theory and the theory of rational choice have recently been the subjects of considerable research by philosophers and economists However no adequate anthology exists which can be used to introduce students to the field This volume is designed to meet that need The essays included are organized into five parts covering the foundations of decision theory the conceptualization of probability and utility philosophical difficulties with the rules of rationality and with the assessment of probability and causal decision theory The

editors provide an extensive introduction to the field and introductions to each part *Non-Bayesian Decision Theory* Martin Peterson, 2008-06-06 For quite some time philosophers economists and statisticians have endorsed a view on rational choice known as Bayesianism The work on this book has grown out of a feeling that the Bayesian view has come to dominate the academic community to such an extent that an alternative non Bayesian position is rarely researched Needless to say I think this is a pity Non Bayesian positions deserve to be examined with much greater care and the present work is an attempt to defend what I believe to be a coherent and reasonably detailed non Bayesian account of decision theory The main thesis I defend can be summarised as follows Rational agents maximise subjective expected utility but contrary to what is claimed by Bayesians utility and subjective probability should not be defined in terms of preferences over uncertain prospects On the contrary rational decision makers need only consider preferences over certain outcomes It will be shown that utility and probability functions derived in a non Bayesian manner can be used for generating preferences over uncertain prospects that support the principle of maximising subjective expected utility To some extent this non Bayesian view gives an account of what modern decision theory could have been like had decision theorists not entered the Bayesian path discovered by Ramsey de Finetti Savage and others I will not discuss all previous non Bayesian positions presented in the literature

Preferences Christoph Fehige, Ulla Wessels, 2011-07-20 No detailed description available for Preferences **Autonomy and Patients' Decisions** Merle Spriggs, 2005-01-01 Patient autonomy is an important concept in the clinical context but the idea in contemporary bioethics discussions is often muddled By looking closely at the ideas of Rousseau Kant and Mill *Autonomy and Patients Decisions* traces the modern concept of autonomy from its historical roots then identifying the four distinct notions of autonomy being referred to in contemporary discussion *Fundamentals of the Fuzzy Logic-Based Generalized Theory of Decisions* Rafik Aziz Aliev, 2013-01-12 Every day decision making and decision making in complex human centric systems are characterized by imperfect decision relevant information Main drawback of the existing decision theories is namely incapability to deal with imperfect information and modeling vague preferences Actually a paradigm of non numerical probabilities in decision making has a long history and arose also in Keynes's analysis of uncertainty There is a need for further generalization a move to decision theories with perception based imperfect information described in NL The languages of new decision models for human centric systems should be not languages based on binary logic but human centric computational schemes able to operate on NL described information Development of new theories is now possible due to an increased computational power of information processing systems which allows for computations with imperfect information particularly imprecise and partially true information which are much more complex than computations over numbers and probabilities The monograph exposes the foundations of a new decision theory with imperfect decision relevant information on environment and a decision maker's behavior This theory is based on the synthesis of the fuzzy sets theory with perception based information and the probability theory The book is self containing and represents in a systematic way

the decision theory with imperfect information into the educational systems The book will be helpful for teachers and students of universities and colleges for managers and specialists from various fields of business and economics production and social sphere

The Logics of Preference N.J. Moutafakis, 2012-12-06 With characteristic incisiveness Georg Henrik von Wright identifies *prohairetic logic* i.e. the logic of preference as the core of a general theory of value concepts Essentially this nucleus involves the logical study of acts from the point of view of their preferability ¹ *italics added* Though the term *prohairesis* is found in Plato as well as in Aristotle's treatment of the relations of preference it is von Wright who introduces this word into contemporary analytical philosophy and succinctly specifies the philosophical dimensions it encompasses The above emphasis upon the philosophical study of the formalization of preferences is a matter of utmost importance for understanding the type of inquiry this investigation attempts to initiate Over the past one hundred years the literature on general theories of subjective utility has become massive where one considers the work done in psychometrics econometrics statistical theories probability theories etc etc Histories in these areas are strong in tracing various evolutions in the development of the concept of preference in decision making However what has not been investigated with sustained attention are the fundamentally philosophical inquiries into the formalization of preference relations
