The G Dimension:

The G-Dimension William G. Madison, 2001 **Gorenstein Dimensions** Lars W. Christensen, 2007-05-06 This book is intended as a reference for mathematicians working with homological dimensions in commutative algebra and as an introduction to Gorenstein dimensions for graduate students with an interest in the same Any admirer of classics like the Auslander Buchsbaum Serre characterization of regular rings and the Bass and Auslander Buchsbaum formulas for injective and projective dimension of f g modules will be intrigued by this book's content Readers should be well versed in commutative algebra and standard applications of homological methods The framework is that of complexes but all major results are restated for modules in traditional notation and an appendix makes the proofs accessible for even the casual user of hyperhomological methods The Data Warehouse Toolkit Ralph Kimball, Margy Ross, 2011-08-08 This old edition was published in 2002 The current and final edition of this book is *The Data Warehouse Toolkit The Definitive Guide to Dimensional Modeling* 3rd Edition which was published in 2013 under ISBN 9781118530801 The authors begin with

fundamental design recommendations and gradually progress step by step through increasingly complex scenarios Clear cut guidelines for designing dimensional models are illustrated using real world data warehouse case studies drawn from a variety of business application areas and industries including Retail sales and e commerce Inventory management Procurement Order management Customer relationship management CRM Human resources management Accounting Financial services Telecommunications and utilities Education Transportation Health care and insurance By the end of the book you will have mastered the full range of powerful techniques for designing dimensional databases that are easy to understand and provide fast query response You will also learn how to create an architected framework that integrates the distributed data warehouse using standardized dimensions and facts Dimension Theory in Dynamical Systems Yakov B. Pesin, 2008-04-15 The principles of symmetry and self similarity structure nature's most beautiful creations For example they are expressed in fractals famous for their beautiful but complicated geometric structure which is the subject of study in dimension theory And in dynamics the presence of invariant fractals often results in unstable turbulent like motions and is associated with chaotic behavior In this book Yakov Pesin introduces a new area of research that has recently appeared in the interface between dimension theory and the theory of dynamical systems Focusing on invariant fractals and their influence on stochastic properties of systems Pesin provides a comprehensive and systematic treatment of modern dimension theory in dynamical systems summarizes the current state of research and describes the most important accomplishments of this field Pesin's synthesis of these subjects of broad current research interest will be appreciated both by advanced mathematicians and by a wide range of scientists who depend upon mathematical modeling of dynamical processes

Commutative Algebra, Singularities and Computer Algebra Jürgen Herzog, Victor Vuletescu, 2012-12-06
Proceedings of the NATO Advanced Research Workshop held in Sinaia Romania 17-22 September 2002 Short Stories Bob

Avis,2014-09-19 This is a book of short stories all originally written by Bob Avis *Introduction to Abelian Model Structures and Gorenstein Homological Dimensions* Marco A. P. Bullones,2016-08-19 Introduction to Abelian Model Structures and Gorenstein Homological Dimensions provides a starting point to study the relationship between homological and homotopical algebra a very active branch of mathematics The book shows how to obtain new model structures in homological algebra by constructing a pair of compatible complete cotorsion pairs related to a specific homological dimension and then applying the Hovey Correspondence to generate an abelian model structure The first part of the book introduces the definitions and notations of the universal constructions most often used in category theory The next part presents a proof of the Eklof and Trlifaj theorem in Grothendieck categories and covers M Hovey's work that connects the theories of cotorsion pairs and model categories The final two parts study the relationship between model structures and classical and Gorenstein homological dimensions and explore special types of Grothendieck categories known as Gorenstein categories As self contained as possible this book presents new results in relative homological algebra and model category theory The author also re proves some established results using different arguments or from a pedagogical point of view In addition he proves folklore results that are difficult to locate in the literature **Commutative Algebra** Marco Fontana, Salah-Eddine Kabbaj, Bruce Olberding, Irena Swanson,2010-09-29 Commutative algebra is a rapidly growing subject that is developing in many different directions This volume presents several of the most recent results from various areas related to both Noetherian and non Noetherian commutative algebra This volume contains a collection of invited survey articles by some of the leading experts in the field The authors of these chapters have been carefully selected for their important contributions to an area of commutative algebraic research Some topics presented in the volume include generalizations of cyclic modules zero divisor graphs class semigroups forcing algebras syzygy bundles tight closure Gorenstein dimensions tensor products of algebras over fields as well as many others This book is intended for researchers and graduate students interested in studying the many topics related to commutative algebra Algebraic Quotients. Torus Actions and Cohomology. The Adjoint Representation and the Adjoint Action A. Bialynicki-Birula, J. Carrell, W.M. McGovern,2002-04-24 This is the second volume of the new subseries Invariant Theory and Algebraic Transformation Groups The aim of the survey by A Bialynicki Birula is to present the main trends and achievements of research in the theory of quotients by actions of algebraic groups This theory contains geometric invariant theory with various applications to problems of moduli theory The contribution by J Carrell treats the subject of torus actions on algebraic varieties giving a detailed exposition of many of the cohomological results one obtains from having a torus action with fixed points Many examples such as toric varieties and flag varieties are discussed in detail W M McGovern studies the actions of a semisimple Lie or algebraic group on its Lie algebra via the adjoint action and on itself via conjugation His contribution focuses primarily on nilpotent orbits that have found the widest application to representation theory in the last thirty five years *Towards a Model of Gravitonicity* James Shufflebotham,2025-09-10 This

book develops a model of the gravitation in Music that is hoped to benefit practitioners analysts and educators from many musical backgrounds Audio spectrum analysis is undertaken in conjunction with Chord Scale Theory as taught at Berklee College of Music to reveal Gravi Tone Series GS specific mappings of twelve distance values onto all twelve pitch classes It is argued that the GS are attributed by a four quality psychological process entitled Gravi Tone Series Filtering Conceptual metaphor theory is used to reason that the distance is metaphorically shaped by our embodied understanding of physical distance The construction of meaning is then extrapolated by consulting John Shepherd and Peter Wicke s Music and Cultural Theory 1997 establishing how Gravitonicity may be negotiable for different individuals and in the same individual at different times 175 With a potentially unifying perspective on all types of scales harmony and functionality Gravitonicity could belong to the general theory of music
