

Scientific Foundations of Psychology

Introducing Psychology

Early Psychology

Structuralism and functionalism are two of the earliest studies of psychology.

Wilhelm Wundt is considered the father of psychology. He founded a laboratory which was the starting point of psychology as a science.

Edward Titchener was one of Wundt's students. He came up with the theoretical approach of structuralism.

Structuralism

Structuralism is studying the mind by looking at what it is made of. This was a very flawed approach because of the introspection research method, which asked individuals to observe themselves perceive and think.

Functionalism

William James wrote the first psychology textbook. Functionalism is an attempt to study what the mind does or its function.

Max

Horkheimer and the Foundations of the Frankfurt School John Abromeit, 2011-10-10 This book is the first comprehensive intellectual biography of Max Horkheimer during the early and middle phases of his life, 1895-1941. Drawing on unexamined new sources, John Abromeit describes the critical details of Horkheimer's intellectual development. This study recovers and reconstructs the model of early Critical Theory that guided the work of the Institute for Social Research in the 1930s. Horkheimer is remembered primarily as the co-author of *Dialectic of Enlightenment*, which he wrote with Theodor W. Adorno in the early 1940s. But few people realize that Horkheimer and Adorno did not begin working together seriously until the late 1930s or that the model of Critical Theory developed by Horkheimer and Erich Fromm in the late 1920s and early 1930s differs in crucial ways from *Dialectic of Enlightenment*. Abromeit highlights the ways in which Horkheimer's early Critical Theory remains relevant to contemporary theoretical discussions in a wide variety of fields. The International Journal of

Psycho-analysis Ernest Jones, 1922. Includes abstracts and book reviews. **The Pedagogical Seminary**, 1921. Vols 5-15 include Bibliography of child study by Louis N. Wilson. **The Scientific Foundation of Neuropsychological Assessment**

Elbert Russell, 2011-12-12 Neuropsychology is a specialized branch of psychology which focuses on the relationship between the brain and human functions including cognition, behaviour and emotion. With an emphasis on a scientific approach which includes analysing quantitative data, neuropsychology follows an information processing approach to brain activity using standard assessments to evaluate various mental functions. This book examines the standardized battery of tests in neuropsychology with a particular focus on forensic applications of these tests, suggesting that a unified theory of assessment needs to be established. Bringing together multiple articles related to forensic neuropsychology, this book offers an exploration of the neurological and psychometric theoretical basis for standardized batteries as well as a comparison between flexible and standardized batteries. Ultimately, it is argued that a standardized battery of tests need to be used and explains the justification for the reliability of this approach, especially in relation to expert witness testimony. While doing this, formal procedures including advanced mathematical procedures such as formulas and decision tree algorithms are presented to be utilized in assessments. With its thorough examination of the theoretical and practical applications of a standardized battery in neuropsychological assessment, this book will prove helpful to clinical practitioners and attorneys using assessment for their cases. Provides a unified theoretical basis for a standardized neuropsychological assessment battery. Shows the justification for using neuropsychological assessment in forensic applications. Offers practical examples which can be used to

create a standardized assessment battery The Foundations of Phenomenological Psychotherapy Giampiero Arciero, Guido Bondolfi, Viridiana Mazzola, 2018-05-30 This book addresses selected central questions in phenomenological psychology a discipline that investigates the experience of self that emerges over the course of an individual's life while also outlining a new method the formal indication as a means of accessing personal experience while remaining faithful to its uniqueness In phenomenological psychology the psyche no longer refers to an isolated self that remains unchanged by life's changing situations but is rather a phenomenon ipseity which manifests itself and constantly takes form over the course of a person's unique existence Thus the formal indication allows us to study the way in which ipseity relates to the world in different situations in a way that holds different meanings for different people Based on this new approach phenomenological psychotherapy marks a transition from a mode of grasping the truth about oneself through reflection to a mode of accessing the disclosure of self through a work of self transformation the care of self that requires the person to actually change her position on herself By putting forward this method the authors shed new light on the dynamic interplay between a person's historicity and uniqueness on the one hand and the related physiopathological mechanisms on the other providing evidence from the fields of genetics cardiology the neurosciences and psychiatry The book will appeal to a broad readership from psychiatrists psychologist and psychotherapists to researchers in these fields **The Johns Hopkins Alumni Magazine** Lawrence Counselman Wroth, 1921 **The Foundation of Phenomenology** Marvin Farber, In this widely hailed and long out of print classic of twentieth century philosophic commentary Professor Farber explains the origin development and function of phenomenology with a view towards its significance for philosophy in general The book offers a general account of Husserl and the background of his philosophy The early chapters are devoted to his mathematical philosophical and psychological studies The refutation of psychologism is present in detail together with the critical reaction to it The development of his logical theories in the light of contemporary literature at the close of the 19th century is next considered The main content of the six Logical Investigations follows which contribute to the phenomenological elucidation of experience and knowledge The phenomenological philosophy of logic as developed in Husserl's later writings is then introduced followed by a discussion of the phenomenological method and its proper function Farber makes clear his preference for phenomenology as a purely descriptive method and his opposition to have it serve as a last stronghold of metaphysics Indispensable as groundwork for descriptive philosophical study this book will deeply interest not only serious students of philosophy and psychology but also those who are concerned with the philosophical aspects of mathematics social and natural sciences law and psychiatry Marvin Farber 1901 1980 taught at the University of Buffalo from 1927 1974 During that time he founded and was the editor of Philosophical and Phenomenological Research In the early 1920's he received his doctorate at Harvard University and he studied in Germany under Edmund Husserl He is the author of three major works on phenomenology Phenomenology as a Method Naturalism and Subjectivism and this volume **The Journal of Philosophy,**
