**Victory** John D. Caldwell, 2018-11-09 This groundbreaking book provides the first systematic comparison of America s modern wars and why they were won or lost John D Caldwell uses the World War II victory as the historical benchmark for evaluating the success and failure of later conflicts Unlike WWII the Korean Vietnam and Iraqi Wars were limited but they required enormous national commitments produced no lasting victories and generated bitter political controversies Caldwell comprehensively examines these four wars through the lens of a strategic architecture to explain how and why their

outcomes were so dramatically different He defines a strategic architecture as an interlinked set of continually evolving policies strategies and operations by which combatant states work toward a desired end Policy defines the high level goals a nation seeks to achieve once it initiates a conflict or finds itself drawn into one Policy makers direct a broad course of action and strive to control the initiative When they make decisions they have to respond to unforeseen conditions to guide and determine future decisions Effective leaders are skilled at organizing constituencies they need to succeed and communicating to them convincingly Strategy means employing whatever resources are available to achieve policy goals in situations that are dynamic as conflicts change quickly over time Operations are the actions that occur when politicians soldiers and diplomats execute plans A strategic architecture Caldwell argues is thus not a static blueprint but a dynamic vision of how a state can succeed or fail in a conflict

**Climate Change Policy** Stephen H. Schneider, Armin Rosencranz, John O. Niles, 2002-08-01 Questions surrounding the

issue of climate change are evolving from Is it happening to What can be done about it The primary obstacles to addressing it at this point are not scientific but political and economic nonetheless a quick resolution is unlikely Ignorance and confusion surrounding the issue including a lack of understanding of climate science its implications for the environment and society and the range of policy options available contributes to the political morass over dealing with climate change in which we find ourselves Climate Change Policy addresses that situation by bringing together a wide range of new writings from leading experts that examine the many dimensions of the topics most important in understanding climate change and policies to combat it Chapters consider climate science in historical perspective analysis of uncertainties in climate science and policy the economics of climate policy North South and intergenerational equity issues the role of business and industry in climate solutions policy mechanisms including joint implementation emissions trading and the so called clean development mechanism Regardless of the fate of the Kyoto Protocol the issues raised in that debate will persist as new climate protection regimes emerge this volume treats most of those topics Tying the chapters together is a shared conclusion that climate change is a real and serious problem and that we as a society have an obligation not merely to adapt to it but to mitigate it in whatever intelligent ways we can develop Cost effectiveness is not disdained but neither is the imperative for valuing species threatened by rapid climate change
