Menghe Miao, John H Xin, 2017-09-07 *Engineering of High Performance Textiles* discusses the fiber to fabric engineering of various textile products. Each chapter focuses on practical guidelines and approaches for common issues in textile research and development. The book discusses high performance fibers and yarns before presenting the engineering fabrics and architectures needed for particular properties required of high performance textiles. Properties covered include moisture absorption, pilling resistant knitwear, fire retardant fabrics, camouflage fabrics, insect repellent fabrics, filtration and many more. Coordinated by two highly distinguished editors, this book is a practical resource for all those engaged in textile research, development and production for both traditional and new generation textile products and for academics involved in research into textile science and technology. Offers a range of perspectives on high performance textiles from an international team of authors with diverse expertise in academic research, textile development and manufacture. Provides systematic and comprehensive coverage of the topic from fabric construction through product development to the range of current and potential applications that exploit high performance textile technology. Led by two high profile editors with many years experience in engineering high performance textiles. **Human Body Temperature** Y. Houdas, E.F.J.

Ring, 2013-06-29 The physiology of man is a complex subject. Unfortunately the regulation of temperature in the human body is not always well explained in textbooks. Many conference proceedings on the subject have been produced that give excellent detail on research topics. However the subject matter is rarely presented as a composite whole. New technology has broadened the scope of methods available for studying body temperature. Thermography in particular has made it possible to record in real time the temperature distribution of large areas of the body surface. Modern image processing methods permit dynamic studies to be carried out and detailed analyses made retrospectively, a tremendous advance over the complex and slow techniques formerly used by physiologists. Yet although the association between disease and temperature is as old as medicine itself, beyond the implicit faith in the clinical mercury thermometer other measuring techniques are finding a slow acceptance. This book is designed to put into perspective the critical factors that make up body temperature. Body temperature cannot be viewed as a static entity but rather must be seen as a dynamic process. An understanding of this phenomenon is important to all who use thermal imaging and measuring techniques in clinical medicine. These methods have in recent years brought engineers, physicists, technicians and clinicians together. Inevitably however there are gaps and overlaps in technology and understanding. **Pantologia**, 1813 **The Human mechanism** Theodore

Hough, 1918 *Human Body* Karen L. LaBat, Karen S. Ryan, 2019-02-18 *Human Body A Wearable Product Designer's Guide* unlike other anatomy books is divided into sections pertinent to wearable product designers. Two introductory chapters include many definitions, an introduction to anatomical terminology and brief discussions of the body's systems, setting the stage for the remaining chapters. The book is extensively referenced and has a large glossary with both anatomical and design terms, making it maximally useful for interdisciplinary collaborative work. The book includes 200 original illustrations.
