Headaches and migraines.

Research links **poor sleep quality** to migraines and sleep apnea to headaches.

Depleted sex drive.

Getting enough sleep is important for promoting **healthy sexual desire and genital response**. It also appears to play a role in **how often** we engage in sexual activity with our partners.

Poor vision.

Sleep deprivation is linked with **tunnel vision, double vision, and dimness**. The longer you're awake, the more **visual errors** you'll see and the more likely you are to **hallucinate**.

Weight gain.

 Despite the occasional outcries to the contrary the field of behavior therapy is still growing and the asymptote has not been
 reached yet The umbrella of behavior therapy continues to enlarge and still is able to encompass new theories new concepts
 new research new data and new clinical techniques Although the number of new behavioral journals now has stabilized we
 still see a proliferation of books on the subject In the past few years however we have seen considerable specialization within
 behavior therapy No longer is it possible to be a generalist and remain fully abreast of all the relevant developments Thus we
 see behavior therapists who deal with adults those who deal with children those whose specialty is hospital psychiatry and
 those who see themselves as practitioners of behavioral medicine Even within a subarea such as behavioral medicine
 specialization runs supreme to the extent that there are experts in the specific addictions adult medical problems and child
 medical problems Given the extent of specialization there are numerous ways to skin the proverbial cat We therefore have
 chosen to look at the contemporary work in behavior therapy that is being carried out with adults in part of course because
 of our long standing interest in this area as teachers researchers and clinicians In so doing we have chosen to highlight the

clinical aspects of the endeavor but not at the expense of the rich research heritage for each of the specific adult disorders
