[Saving Orchids](#) Philip Seaton, Lawrence W. Zettler, 2025-02-28 A gorgeously illustrated ode to the beauty and significance of orchids and to those fighting to save these unique plants across the globe Until recently a myriad of lifeforms enriched our lives In some places listening to a nighttime chorus of frogs in the neighborhood marsh was an archetypal touchstone of childhood Children would search for tadpoles just steps away from native Lady s Tresses orchids Year by year the chorus became quieter Today only a few frogs and orchids remain Is this the world we want our children to inherit Do we want orchids to slip through our fingers and eventually to vanish For biologists Philip Seaton and Lawrence W Zettler and the intrepid orchid defenders they introduce in this book the answer is no Seaton and Zettler have traveled the world over the past three decades studying orchids flagship species for plant conservation Stunningly illustrated this book is a culmination of stories about the people young and old alike dedicated to protecting these remarkable plants from extinction In the 19th century collectors removed shipped and sold vast numbers of orchids from the wild Today scientists strive to reverse this harm to protect and rebuild remnants of orchids original habitats against human disruption including climate change Seaton and Zettler reveal these plants bizarre pollination partners risky liaisons with fungi and adaptation to human domestication to show that learning orchids scientific secrets and finding human helpers is key to these plants survival

Terra Michael Novacek, 2008-11-11 A paleontologist awakens us to the extinction event that human activity is bringing about today The natural world as humans have always known it evolved close to 100 million years ago with the appearance of flowering plants and pollinating insects during the age of the dinosaurs Its tremendous history is now in danger of profound catastrophic disruption In Terra a brilliant synthesis of evolutionary biology paleontology and modern environmental science Michael Novacek shows how all three can help us understand and prevent what he and others

call today's mass extinction event Humanity's use of land our consumption the pollution we create and our contributions to global warming are causing this crisis True the fossil record of hundreds of millions of years reveals that wild and bounteous nature has always evolved not quietly but thunderously as species arise flourish die off and are replaced by new species We learn from paleontology and archaeology that for 50 000 years human hunting mining and agriculture have changed many localities sometimes irrevocably But today Novacek insists our behavior endangers the entire global ecosystem And if we disregard through ignorance antipathy or apathy the theory of evolution that developed with our modern understanding of the Earth's past we not only impede enlightenment but threaten any practical strategy for our own survival The evolutionary future of the entire living planet depends on our understanding this

The Ex Situ Conservation of Plant Genetic Resources J.G. Hawkes, Nigel Maxted, B.V. Ford-Lloyd, 2012-12-06 It is a distressing truism that the human race during the last millennium has caused the exponential loss of plant genetic diversity throughout the world This has had direct and negative economic political and social consequences for the human race which at the same time has failed to exploit fully the positive benefits that might result from conserving and exploiting the world's plant genetic resources However a strong movement to halt this loss of plant diversity and enhance its utilisation for the benefit of all humanity has been underway since the 1960s Frankel and Bennett 1970 Frankel and Hawkes 1975 This initiative was taken up by the Convention on Biological Diversity CBD 1992 that not only expounds the need to conserve biological diversity but links conservation to exploitation and development for the benefit of all Article 8 of the Convention clearly states the need to develop more effective and efficient guidelines to conserve biological diversity while Article 9 along with the FAO International Undertaking on Plant Genetic Resources promotes the adoption of a complementary approach to conservation that incorporates both ex situ and in situ techniques
