Teaching and Learning in Medical and Surgical Education Linda H. Distlehorst, Gary L. Dunnington, J. Roland Folse, 2000-04-01 The idea for this book was originally conceived by Terrill Mast in conversations with Roland Folse Dr Mast was dedicated to the belief that all medical teachers should be generalists with skills and knowledge in all aspects of the field Before his untimely death he recruited most of the prestigious contributors to this important new book This comprehensive volume features a review of the major topics in medical and surgical education by today's leading authorities in the field The assembled authors represent a Who's Who in medical education around the world Each chapter provides a state of the art overview of the topic along with the projected changes most likely to occur over the next decade A must have for anyone responsible for educating students residents and physicians in the medical and surgical fields this new book addresses the critical medical educational issues of the next millennium in one comprehensive volume *Achieving Excellence in Medical Education* Richard B. Gunderman, 2007-07-25 A goldmine of theoretical insights and practical suggestions *Achieving Excellence in Medical Education* explores the essential question facing medical educators and learners today What is our vision of educational excellence and what can we do to enhance our performance Among the topics explored within this engaging informative and thought provoking text are Education's position as a priority of medical schools seminal educational insights from non medical educators best practices of outstanding educators and learners promises and pitfalls of new educational technologies key resources for promoting excellence in medical education medical education's role in preparing future leaders leadership roles for medical schools in universities and society *Higher Education - Reflections From the Field - Volume 3*, 2023-11-02 COVID wrought havoc on the world's economic systems Higher education did not escape the ravages brought on by the pandemic as institutions of higher education around the world faced major upheavals in their educational delivery systems Some institutions were prepared for the required transition to online learning Most were not Whether prepared or not educators rose to the challenge The innovativeness of educators met the challenges as digital learning replaced the face to face environment In fact some of the distance models proved so engaging that many students no longer desire a return to the face to face model As with all transitions some things were lost while others were gained This book examines practice in the field as institutions struggled to face the worst global pandemic in the last century The book is organized into four sections on Changing Education Education in the Pandemic Sustaining University Education and Embracing the Future in a Global World It presents various perspectives from educators around the world to illustrate the struggles and triumphs of those facing new challenges and implementing new ideas to empower the educational process These discussions shed light on the impact of the pandemic and the future of higher education post COVID Higher education has been forever changed and higher education as it once was may never return While many questions arise the achievements in meeting and overcoming the pandemic illustrate the creativity and innovativeness of educators around the

world who inspired future generations of learners to reach new heights of accomplishment even in the face of the pandemic

Essential Readings in Problem-Based Learning Andrew Walker, Heather Leary, Cindy Hmelo-Silver, 2015-01-15 Like most good educational interventions problem based learning PBL did not grow out of theory but out of a practical problem Medical students were bored dropping out and unable to apply what they had learned in lectures to their practical experiences a couple of years later Neurologist Howard S Barrows reversed the sequence presenting students with patient problems to solve in small groups and requiring them to seek relevant knowledge in an effort to solve those problems Out of his work PBL was born The application of PBL approaches has now spread far beyond medical education Today PBL is used at levels from elementary school to adult education in disciplines ranging across the humanities and sciences and in both academic and corporate settings This book aims to take stock of developments in the field and to bridge the gap between practice and the theoretical tradition originated by Barrows that underlies PBL techniques

In the Nation's Compelling Interest Institute of Medicine, Board on Health Sciences Policy, Committee on Institutional and Policy-Level Strategies for Increasing the Diversity of the U.S. Health Care Workforce, 2004-06-29 The United States is rapidly transforming into one of the most racially and ethnically diverse nations in the world Groups commonly referred to as minorities including Asian Americans Pacific Islanders African Americans Hispanics American Indians and Alaska Natives are the fastest growing segments of the population and emerging as the nation's majority Despite the rapid growth of racial and ethnic minority groups their representation among the nation's health professionals has grown only modestly in the past 25 years This alarming disparity has prompted the recent creation of initiatives to increase diversity in health professions In the Nation's Compelling Interest considers the benefits of greater racial and ethnic diversity and identifies institutional and policy level mechanisms to garner broad support among health professions leaders community members and other key stakeholders to implement these strategies Assessing the potential benefits of greater racial and ethnic diversity among health professionals will improve the access to and quality of healthcare for all Americans
